This document forms part of the Product Disclosure Statement (PDS) for the following products, referred to in this document as 'FirstChoice':

- FirstChoice Wholesale Investments
- FirstChoice Wholesale Personal Super and Pension
- FirstChoice Investments (closed to new accounts).

A reference to an investment option offered through FirstChoice includes a reference to the 'Wholesale' and the 'Retail' offering of that investment option (as relevant to the investment you hold), except where indicated otherwise. For example, a reference to the First Sentier Wholesale Strategic Cash option on page 12 includes the First Sentier Strategic Cash option (as relevant to the investment you hold).

The PDS for each product also includes references to this document and certain other documents, each of which contain statements and information incorporated by reference and which are taken to be included in the PDS. These documents must be read in conjunction with the PDS for the product you wish to apply for or are otherwise considering.

A reference to 'the PDS' in this document is a reference to the Product Disclosure Statement for the relevant product and all of the statements and information incorporated by reference (including this document) as described and listed in the Product Disclosure Statement for the relevant product.

You should also read the PDS and all statements and information incorporated by reference into the PDS before making a decision about the relevant product. If you would like a paper copy to be sent to you, free of charge, contact Colonial First State on 13 13 36 or email us at contactus@cfs.com.au

Investments in FirstChoice Wholesale Investments and FirstChoice Investments are offered by Colonial First State Investments Limited ABN 98 002 348 352 AFSL 232468 ('the responsible entity', 'CFSIL'). Investments in FirstChoice Wholesale Personal Super and Pension are offered by Avanteos Investments Limited ABN 20 096 259 979, AFSL 245531 ('AIL', 'the trustee') from the Colonial First State FirstChoice Superannuation Trust ('FirstChoice Trust') ABN 26 458 298 557, a resident, regulated superannuation fund (within the meaning of the Superannuation Industry (Supervision) Act 1993) that is not subject to a direction not to accept contributions. Unless otherwise stated in the PDS, AIL and CFSIL are also referred to in the PDS as 'we', 'our' or 'us'.

CFSIL is the responsible entity for most of the investment options in FirstChoice Wholesale Investments and FirstChoice Investments. Colonial First State (CFS) refers to Superannuation and Investments HoldCo Pty Limited ABN 64 644 660 882 and its subsidiaries which include AIL and CFSIL. Commonwealth

Bank of Australia ABN 48 123 123 124 AFSL 234945 (CBA) holds a significant minority interest in AIL and CFSIL. The investment performance and the repayment of capital of AIL and CFSIL products is not guaranteed.

The issue of FirstChoice Wholesale Investments and FirstChoice Investments is authorised solely by CFSIL. The issue of FirstChoice Wholesale Personal Super and Pension is authorised solely by AIL.

Apart from AIL or CFSIL, no other CFS entities are responsible for any statement or information contained within a FirstChoice PDS. Each FirstChoice product is subject to investment risk, including loss of income and capital invested. The investment performance and the repayment of capital of the FirstChoice products is not guaranteed.

The information provided in this document is general information only and does not take account of your objectives, personal financial situation or needs. Because of that, before acting on the information, you should consider its appropriateness having regard to these factors. You should consider obtaining financial advice relevant to your personal circumstances before investing. You should also consider the relevant terms and conditions and PDS (as applicable) for the product you are considering, before making any decision to acquire, or continue to hold, an interest in that product.

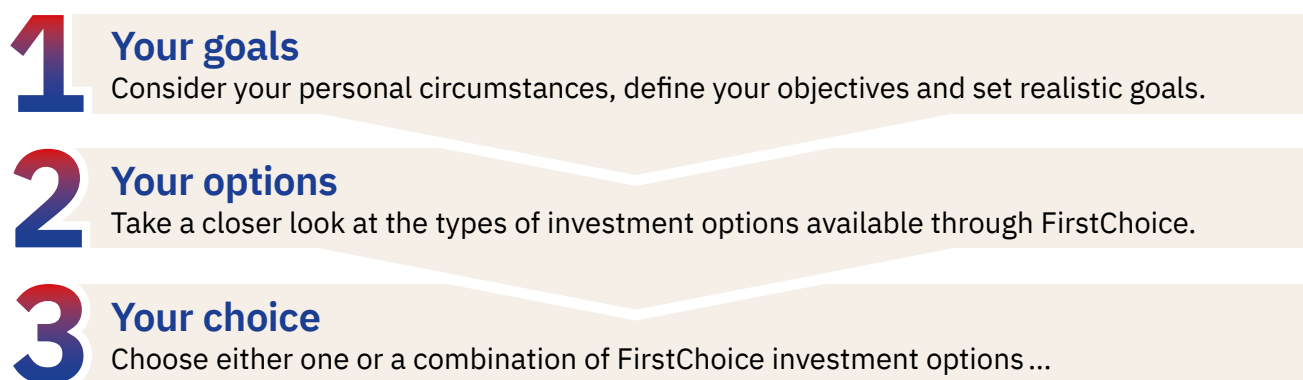

The investment managers of the options available for investment through FirstChoice have given, and not withdrawn, their consent to be included in the PDS in the form and context in which they are included. The investment managers are acting as investment managers only for the relevant options. They are not issuing, selling, guaranteeing, underwriting or performing any other function in relation to the options. AIL and CFSIL reserve the right to outsource any or all of its investment management functions, including to related parties, without notice to investors.

FirstChoice and FirstNet are trademarks of Colonial First State Investments Limited.

Information contained in this document that is not materially adverse information is subject to change from time to time and may be updated via our website and can be found at any time by visiting www.cfs.com.au/personal/products/products-and-update.html. A paper or electronic copy of any updated information is available free of charge on request by contacting us on 13 13 36.

The Target Market Determinations (TMD) for our financial products can be found at www.cfs.com.au/tmd and include a description of who the financial product is appropriate for.

Constructing your FirstChoice portfolio

a Use our professionally constructed multi-manager portfolios

You can select one or more of our professionally constructed multi-manager portfolios¹; each combines a number of investment managers into one single portfolio.

Multi-manager portfolios provide a convenient and simple way of diversifying your investment across different investment managers in one single investment option.

b Tailor your own investment portfolio with our other multi-sector and single manager options

You can tailor your own investment portfolio by selecting one or more of the wide range of other multi-sector and single manager options that we have selected due to their popularity among investors and their financial advisers.

As your investment needs change over time, the wide investment choice offered through FirstChoice enables you to adjust your portfolio to suit these changing needs.

Benefits of investing in a multi-manager portfolio

Ready-made portfolios

We construct the multi-manager portfolios for investors so they can have access to a range of ready-made portfolios of professionally selected investment managers.

Diversification

As each of the multi-manager portfolios combines a number of professionally selected investment managers in one investment portfolio, they provide you with a convenient way of diversifying across investment managers to manage your investment risk.

How do we construct the multi-manager portfolios?

We employ a dedicated team of investment professionals to construct the multi-manager portfolios. We also use a specialist investment consulting and research firm to assist us in this process.

The multi-sector multi-manager options will invest in the underlying single sector multi-manager portfolios.

Constructing the multi-manager portfolios is a three-step process:

Step 1

Select specialist investment managers for each asset class

When selecting investment managers for each asset class, we aim to capture the competitive strengths of each investment manager. Key selection criteria such as organisational stability, performance track record and investment process are used in assessing investment managers.

Step 2

Combine the investment managers

We aim to select a combination of investment managers whose investment styles are complementary. In other words, we choose a mix of investment managers that is likely to deliver more consistent returns so that performance is not dependent on a single manager or a single investment style.

Step 3

Monitor ongoing quality

We regularly monitor the multi-manager portfolios and, when needed, make changes to seek improved performance and manage risk.

1 Not all multi-manager options are available to pre-retirement accounts. The multi-manager options that are available are identified in the 'FirstChoice range of investment options' and 'A guide to your investment option risk profile' sections of this document, and listed in the Application form with 'TTR' in the option name.

2 This option is not available in FirstChoice Investments.

Tailor your own investment portfolio with our **other multi-sector and single manager options**

You can tailor your own investment portfolio by selecting one or more of the wide range of other multi-sector and single manager options that we have selected due to their popularity among investors and their financial advisers.

As your investment needs change over time, the wide investment choice offered through FirstChoice enables you to adjust your portfolio to suit these changing needs.

Other multi-sector and single manager options

Multi-sector (pages 43–51)		21 options that invest in a range of asset classes
<ul style="list-style-type: none">• Alternative income• Conservative• Moderate	<ul style="list-style-type: none">• Growth• Diversified real return	<ul style="list-style-type: none">• High growth• Lower volatility share
Single sector (pages 51–90)		120 options that predominantly invest in one asset class
<ul style="list-style-type: none">• Cash and deposits• Enhanced cash• Short duration fixed interest• Diversified fixed interest• Australian fixed interest• Alternatives	<ul style="list-style-type: none">• Lower volatility share• Australian share• Australian share – small companies• Global share• Global share – emerging markets• Specialist share	<ul style="list-style-type: none">• Australian property and infrastructure securities• Global property and infrastructure securities• Geared

Diversification

An important way to manage your investment risk is to spread your money across different investments. This approach is called diversification.

Through FirstChoice, you can do this in three ways:

Step 1

Within each asset class

Investing in a range of securities within an asset class means that returns will generally be less dependent on the performance of any single security. This may reduce the overall security-specific risk across your portfolio.

Step 2

Across asset classes

Investing in a range of asset classes means that the impact of ups and downs in any single asset class or market can be reduced. That is, you can spread your exposure to different markets.

Step 3

Across investment styles

Different investment managers adopt different styles like 'value' or 'growth', and these styles can perform differently at different times. Investing in a portfolio with a mix of investment managers can help investors smooth out any performance variations more effectively. That is, investment manager risk may be reduced.

Your financial adviser can help you understand investment risk, and design an investment strategy for you.

Trustee diversification guidelines

For Personal Super and Pension investors, the trustee suggests that no more of your portfolio is invested in each investment category than the percentages outlined below:

Investment category	Maximum suggested portfolio allocation
Diversified real return	70%
Alternatives (including multi-manager)	20%
Australian share – small companies (including multi-manager)	30%
Global share – emerging markets (including multi-manager)	30%
Specialist share	30%
Australian property and infrastructure securities (including multi-manager)	50%
Global property and infrastructure securities (including multi-manager)	50%
Geared – Australian and global share (including multi-manager)	30%

Note: The suggested diversification guidelines are suggestions only and have been prepared without taking account of your objectives, financial situation or needs. Because of that, before making an investment decision, you should consider the appropriateness of the guidelines based on those factors, read the PDS (which is available by calling us on 13 13 36) carefully and consider talking to a financial adviser who can assist you in determining the appropriate allocations for your investment.

Investing all, or a large proportion, of your account balance in a single sector or investment option could reduce the level of diversification within your portfolio and, as a result, increase the risk of losses in the value of your account and/or reduce your retirement income. You should regularly review your portfolio to ensure that the investment options selected and the allocations to these options remain appropriate to your objectives and circumstances. This can be an important consideration where your allocation is to options that are within the higher risk categories. Please speak to your financial adviser for further information.

How is FirstChoice structured?

FirstChoice Wholesale Investments and FirstChoice Investments

When you invest in FirstChoice Wholesale Investments or FirstChoice Investments, your money is combined with other investors' money in a managed investment scheme. Each FirstChoice Wholesale investment option is a separate managed investment scheme.

Inter-funding

We may invest directly or indirectly in other managed investment schemes managed by us to gain exposure and administrative efficiencies.

FirstChoice Wholesale Personal Super and FirstChoice Wholesale Pension

When you invest in FirstChoice Wholesale Personal Super or FirstChoice Wholesale Pension, your money is combined with other investors' money in FirstChoice. Each FirstChoice Wholesale investment option is a separate option within this superannuation fund.

Each option in FirstChoice Wholesale invests in an underlying 'pool' which is managed according to the investment option's objectives. In most cases, CFSIL is the responsible entity for the underlying pools, which are managed by each investment manager through a mandate arrangement in FirstChoice Wholesale Personal Super and FirstChoice Wholesale Pension. FirstRate Wholesale Saver, FirstRate Cash, FirstRate Cash Non-Auto-rebalancing and FirstRate Wholesale Term Deposits are deposited with Commonwealth Bank of Australia.

What is a mandate?

A mandate is an agreement with an investment manager that sets out how the money is to be invested. The mandate may specify an appropriate benchmark, acceptable investments and investment ranges. A mandate structure means that the investments are managed separately on our behalf, and are not pooled with the external investment manager's other investors or invested in one of the investment manager's wholesale investment schemes. Therefore, the performance of a mandate may differ from the underlying investment manager's wholesale investment scheme. However, using mandates gives us greater flexibility, including the ability to issue timely unit prices and to better control administration and reporting.

CFS Sustainability

For over 30 years, we've been helping Australians work towards a better financial future. As one of Australia's largest retail superannuation and investments businesses, we can positively contribute to doing good for people and the planet, including addressing climate change and protecting the world's resources. Over the past 15 years we have partnered with some of the world's leading investment managers, including Generation Investment Management, Affirmative Investment Management and Baillie Gifford, to offer our clients the opportunity to invest in a manner that aligns to their personal values.

In 2016 we set out our commitment to responsible investing and became a signatory to the United Nations, Principles of Responsible Investment (PRI) in 2017. As a signatory to the PRI, we incorporate environmental, social and governance considerations into investment practices.

This includes our commitment in 2018 to divest from tobacco producers and manufacturers of controversial weapons. In 2021, we committed to align to the goals of the Paris Agreement of net zero emissions by 2050 and to a 30% reduction in Greenhouse Gas emissions by 2030, from 2019 levels for all CFS investment portfolios. As a step towards this goal in 2021, we became a signatory to the Climate Action 100+, an investor led initiative to ensure the world's largest corporate greenhouse gas emitters take the necessary action on climate change.

We are also committed to social issues, signing the Investors Against Slavery and Trafficking Statement and since 2020 have taken action to address modern slavery risks in our business and supply chains. More recently in 2022, we became a signatory to the 40:40 Vision to support gender balance in executive teams.

We will continue our focus and commitment towards providing investors with the means for sustainable, long term wealth creation.

CFS Thrive+ investment philosophy and process

The CFS Thrive+ Sustainable Growth is our first multi-manager option with a sustainability focus. It seeks to deliver competitive market returns and promote better outcomes for our clients and society.

The Thrive+ Sustainable Investment Charter (the Charter) is the framework that guides the sustainable investment criteria for seeking out investments to support and those to avoid. The Charter applies across all asset classes.

Active company engagement and voting

We choose to work with managers who actively engage and advocate the companies we invest in to implement better environmental and social practices. This enables us to use investment capital and active ownership to encourage change across the globe on behalf of our investors.

Areas of focus and exclusions aligned to personal values

As defined in the Charter, a level of screening will apply to fossil fuel activity, weapons and firearms, gambling, pornography, alcohol, tobacco and predatory lending and a focus on issues such as, but not limited to, climate change, healthcare, resource efficiency, sustainable communities and diversity and inclusion. Please refer to the Charter for the current sustainable investment criteria – exclusions, gross revenue thresholds and themes CFS Thrive+ supports. The sustainable investment criteria may change over time as the world and our understanding of it changes.

All reasonable care will be taken to implement the exclusionary screens. Exclusions form part of the investment management agreements with our appointed managers. From time to time, due to timing differences between activities of a company (for example where there has been an acquisition or divestment), the reporting of a company's activities or an error by an external service provider, some companies may temporarily fall outside this screen. If we discover an investment no longer meets our criteria, we will endeavour to divest the holding as soon as practicable.

How do we ensure the ongoing quality of FirstChoice?

Multi-manager portfolios

We regularly monitor the **multi-manager, Sustainability, Enhanced Index Series, Index Series, Lifestage** and **ETF Exposure Series** portfolios.

To ensure the ongoing quality of these portfolios, we are able to make changes including:

- changing the investment objective and/or investment strategy
- changing, removing or adding an investment manager
- changing the percentage allocation to an investment manager
- changing the number of investment managers
- changing the allocation or the number of asset classes within the portfolio.

The actual allocation may vary from the target allocation, generally as a result of market and cash movements; the actual allocation is regularly rebalanced to the target allocation.

We will notify existing investors in affected portfolios of any material changes as soon as practicable. Any change would be considered in light of the potential negative or positive impact on investors.

Updated information on the **multi-manager, Sustainability, Enhanced Index Series, Index Series, Lifestage, ETF Exposure Series** or **single manager** options that is not materially adverse can be obtained by calling Investor Services on 13 13 36 or by visiting the option profile on cfs.com.au/personal/resources/funds-and-performance.html. A paper or electronic copy of the most recent details of the **multi-manager, Sustainability, Enhanced Index Series, Index Series, Lifestage, ETF Exposure Series** or **single manager** options will be provided free of charge on request.

Single manager options

The **single manager** options allow you the choice and flexibility to tailor your own portfolio.

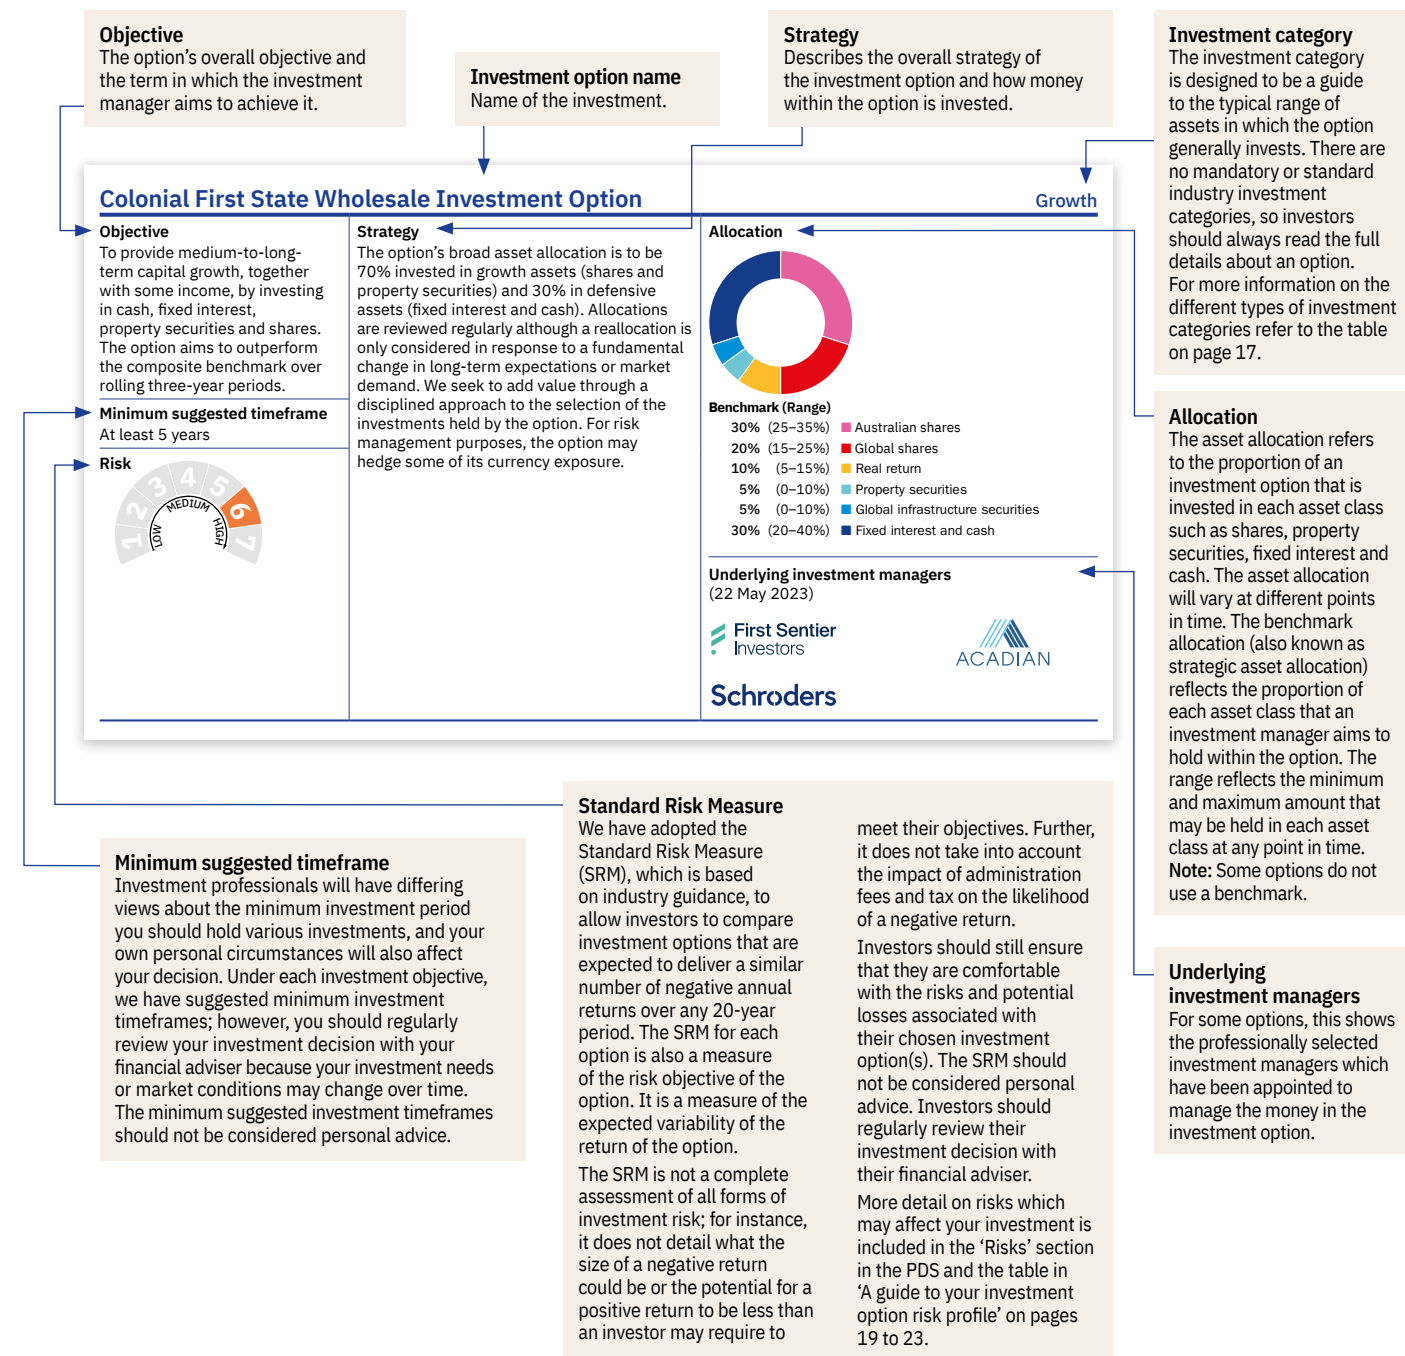

To ensure that we continue to offer a suitable range of **single manager** options, we are able to change the investment options, including the investment objectives and strategies, at any time.

This includes the ability to:

- add, suspend, restrict, close or terminate an investment option
- change an investment manager for an investment option.

Reading the investment options

The example below describes how to understand the options for multi-manager, Enhanced Index Series, Index Series and single manager investments.

Additional investment information

Important information about the investment options

Each FirstChoice manager will have slightly different views regarding the classification of securities into asset classes.

A reference to Australian shares or companies for an option may include, for example, units in trusts listed on the Australian Securities Exchange (ASX) and/or investments in companies listed on an overseas stock exchange if they are also listed on the ASX.

Within their allocations to listed securities, some of the options may purchase unlisted securities on the basis that the securities will list in the future.

More detailed information on each investment option is available by visiting cfs.com.au and selecting 'Find a Fund' or by calling your financial adviser.

Do the options borrow?

Except for the geared options, most options do not borrow except for short-term arrangements for settlement purposes or if an emergency or extraordinary situation arises. Borrowing can only occur in line with an option's investment strategy. If an option borrows, this is detailed in the strategy of the option.

Do the options engage in securities lending?

The options may lend out or transfer their securities under securities lending transactions. When an option engages in lending out securities, there is a risk that the borrower may become insolvent or otherwise become unable to meet, or refuse to honour, its obligations to return the loaned assets. In this event, the option could experience delays in recovering assets and may incur a capital loss. Where an option invests any collateral it receives as part of the securities lending program, such investments are also subject to the general investment risks.

In addition, some options may borrow securities under securities lending arrangements as part of their investment or borrowing strategies. Those options that are involved in these strategies are also exposed to short selling risk. Where an option has been identified as having short selling risk, it will also be exposed to securities lending risk.

What investments can the options hold?

The constitutions/trust deeds of FirstChoice products allow us a great deal of discretion about what investments are held in the options. The investments intended to be held are outlined in the strategy of the option. If we decide to change, we will advise you as soon as practical.

We may need to comply with substantial holding or other restrictions on individual securities from time to time, for example, if holdings within an individual security exceed a certain percentage. The restriction will be lifted if and when capacity becomes available.

Can we outsource the investment management of the options?

CFSIL is the responsible entity for each of the underlying pools in FirstChoice. We may outsource or delegate some or all of the investment management of the options to a related entity or a third party.

We have an investment management agreement in place with each of the investment managers as part of our arrangement to outsource investment management of the investment options. The agreement sets out how money should be invested. It may specify an appropriate benchmark, acceptable investments and investment ranges for investment management.

Appointed investment managers are subject to initial and ongoing reviews to ensure that they can meet their obligations under the investment management agreement. They are required to certify and report to us on certain obligations under the investment management agreement. We also monitor the performance of the investment managers.

Detailed information on each investment manager is provided in the Manager Profile, available at cfs.com.au by selecting 'Find a Fund' or by calling 13 13 36.

Changes to options and investment managers

We may, without prior notice to investors, add, remove or change the investment managers and their allocations in the multi-manager portfolios; and change the investment objective and/or strategy; add, close or terminate an option; or change an investment manager or the approved deposit-taking institution in the single manager options. Any change would be considered in light of the potential negative or positive impact on investors. We will notify existing investors in affected options of any material change as soon as practicable. Updated information that is not materially adverse can be obtained by calling Investor Services on 13 13 36 or by visiting cfs.com.au/personal/products/products-and-update.html. A paper or electronic copy of the updated information will be provided free of charge on request.

Your investment and labour standards or environmental, social or ethical considerations

Except as otherwise disclosed below, as the trustee or responsible entity (as applicable), we don't specifically take into account labour standards or environmental, social or ethical considerations for the purpose of selecting, retaining or realising the investment options. We do not directly manage the investments however we do have a robust governance process for assessing the capabilities of each investment manager. This process includes consideration of an investment manager's approach to assessing the effect that climate change and environmental, social, governance (ESG) issues may have on the investments of each option.

Each investment manager may have its own policy on the extent to which labour standards or environmental, social or ethical considerations are taken into account in their investment process and some options do take one or more of these factors into account.

Due to the labour, environmental and social risks associated with the production of tobacco and manufacture of controversial weapons¹, we do not allow investment managers to invest in securities issued by companies who operate in these industries. Whilst we make every endeavour to exclude these companies, there may, from time to time, be a small level of unintended exposure due to lack of data, corporate activity, indirect exposure or exposure through index derivatives.

Are there any other benefits to CFSIL?

The options receive banking and treasury-related services from CBA in the normal course of business and pay normal commercial fees for them. We may derive monetary or administrative benefits from CBA as a consequence of maintaining bank accounts with CBA and through performing administration services for CBA products.

For the CFSIL geared options where money is borrowed from CBA or its subsidiaries, the terms, where comparable, are substantially the same as those of other lenders.

¹ Controversial weapons include: chemical and biological weapons, cluster munitions, antipersonnel landmines, depleted uranium ammunition, non-detectable fragments, incendiary weapons and blinding lasers.

FirstChoice range of investment options

Different options have different risk/potential return characteristics as shown in the graph below

The investment options in FirstChoice aim, over the longer term, for the general relative risk and potential return characteristics shown in the chart. The chart is not a forecast or future prediction as to risk or potential return and is not to scale. The chart is not advice and takes no account of your personal circumstances. Important further information can be found in the 'Risks' section in the PDS.

Standard Risk Measure (SRM)

The SRM is based on industry guidance to allow investors to compare investment options that are expected to deliver a similar number of negative annual returns over any 20-year period.

The SRM is not a complete assessment of all forms of investment risk; for instance, it does not detail what the size of a negative return could be or the potential for a positive return to be less than an investor may require to meet their objectives. Further, it does not take into account the impact of administration fees and tax on the likelihood of a negative return.

Below is a table that outlines our labelling of risk measures and categories.

Risk band	Risk label	Estimated number of negative annual returns over any 20-year period
1	Very low	Less than 0.5
2	Low	0.5 to less than 1
3	Low to medium	1 to less than 2
4	Medium	2 to less than 3
5	Medium to high	3 to less than 4
6	High	4 to less than 6
7	Very high	6 or greater

1 This option is available to pre-retirement accounts and listed in the Application form with 'TTR' in the option name.

2 This option is not available in FirstChoice Investments.

3 This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

4 This option is not available in FirstChoice Wholesale Investments.

5 This option is only available in FirstChoice Wholesale Pension.

6 This option is only available in FirstChoice Wholesale Investments.

Additional information on risks

Currency risk

How is currency risk managed?

Changes in the value of the Australian dollar lead to a difference between the foreign currency returns or the value of the global investments held by an option and those returns or values expressed in Australian dollars. This is known as foreign currency risk.

Currency is not an asset class and therefore does not give an option either natural long-term growth or an income stream. Rather, currency exposure gives rise to a source of potential volatility of returns – both positive and negative.

Financial instruments can be used to reduce currency risk – this is known as hedging. Hedging is a process where exposure to one currency can be reduced or removed by entering into a transaction that offsets that exposure. If an option is unhedged, then any foreign currency investments the option holds are fully exposed to movements in the Australian dollar, which can have a positive or negative effect on the value of the option.

Whether an option is hedged or unhedged is disclosed under each option's strategy. The extent to which an option is hedged depends on the underlying objectives and risk characteristics of the option. The extent of hedging may also vary over time depending on the value of the Australian dollar. The cash asset allocation limits disclosed for an investment option that hedges its currency exposure, may not include cash held as collateral to back these hedges.

For our professionally constructed multi-manager portfolios, we aim to hedge currency risk arising from global fixed interest and global property securities exposure. For global shares exposure, we offer options that do not hedge, partially hedge or aim to fully hedge currency risk. When implementing a partial currency hedge, our process focuses on using hedging to partially preserve the gains that are made when the Australian dollar falls in value. This helps reduce the impact of later periods of currency rises in value. When the Australian dollar is trading at a level we believe to be close to, or above, fair value, then no hedging of the foreign currency exposure for the investor's capital will take place.

In options that hedge currency risk, movements in the Australian dollar can impact the size of distributions. Generally, a rising Australian dollar will produce gains on the currency hedge and increase the distribution, while a falling Australian dollar will produce currency losses that reduce the distribution.

For more information on how we manage currency, please see the information flyer 'Managing currency risk', available at cfs.com.au or by calling us on 13 13 36.

Other multi-sector and single manager options have specific hedging strategies. For information on these other strategies, please contact us on 13 13 36.

Gearing risk

Additional information on geared options

The aim of gearing is to produce a larger investment return over the long term by using borrowed money in addition to your own funds. The geared options in FirstChoice are 'internally geared', which means that the options borrow the money instead of you borrowing directly.

The benefits of internally geared options are that they are able to borrow at institutional rates, there are no margin calls, and you do not need to apply for a loan or offer security. Importantly, we will not ask investors to provide additional funds to meet borrowing costs or to repay debt. All obligations are met within the option itself.

Some investors, such as superannuation funds or their trustees, may not be able to borrow in their own name, and therefore cannot use standard margin loans. Internally geared options permit such investors to gain leveraged exposure to a selected asset class.

Where do geared options borrow from?

The geared options raise money either by issuing notes or bonds in Australian or international capital markets, and/or by borrowing at competitive rates from a large number of international and Australian financial institutions. Interest and related borrowing costs are paid by the options. Providers of funding have priority over option investors for interest and principal repayments. Providers of funding earn interest and may receive reimbursements relating to early repayments, dealer fees, upfront fees, legal expenses, government charges, account transaction fees and undrawn commitment fees.

How does the gearing work in the geared options?

CFSIL offers nine geared options and is responsible for the gearing of them all, allowing the investment manager to focus on managing the option's investments.

The following five options are managed using '**dynamic gearing**', as described below:

- FirstChoice Wholesale Geared Australian Share
- FirstChoice Wholesale Geared Growth Plus
- Acadian Wholesale Geared Australian Equity
- First Sentier Wholesale Geared Share
- Colonial First State Wholesale Geared Index Australian Share.

These options are managed so that, as far as possible, income from dividends and interest exceeds the cost of borrowing and other expenses, to ensure the preservation of franking credits, which are passed on to you. This process of managing income and expenses is called '**dynamic gearing**' because the gearing ratio may vary according to market conditions, in particular, the relationship between dividend yields and market interest rates. The gearing ratio is the total amount borrowed expressed as a percentage of the total assets of the option.

Dynamic gearing is also a prudent approach which forces a lower gearing ratio when borrowing costs are relatively high or dividend yields reduce. For example, if it costs 6% per

annum to borrow money, and the option earns a net 3% per annum in dividends and other income, this gives a potential gearing ratio of 50%. However, if the borrowing cost rises to 6.50% per annum, with income unchanged, the gearing ratio may fall to about 46%.

The table below illustrates the relationship between the interest rates on borrowings, dividend yields and the gearing levels of a dynamically geared option.

Theoretical gearing level (%)¹

		Dividend yield (pa, net of fund expenses)			
		2.50%	3.00%	3.50%	4.00%
Interest rate on borrowing (pa)	4.00%	60	60	60	60
	5.00%	50	60	60	60
	6.00%	42	50	58	60
	7.00%	36	43	50	57

1 The options will stop additional borrowing at 55%, but the gearing may rise above this level due to market movements or redemptions.

The table is for illustrative purposes only and is not a forecast or future prediction as to the level of gearing or the interest rates that will apply.

Under dynamic gearing, the gearing ratio is managed at our discretion, subject to the availability of debt and ensuring that estimated income exceeds estimated expenses. No additional borrowing is made when the gearing ratio is at 55% or above. The gearing ratio varies daily due to changes in the value of the assets in the option, and applications or redemptions. If these changes cause the gearing ratio to exceed 60%, we repay debt within a reasonable amount of time to reduce the gearing ratio to below 60%.

In the event of the gearing ratio exceeding 75%, we will suspend the processing of redemption requests and, if applicable, distributions until the gearing has decreased to below 75%.

The following three options are managed using 'fixed gearing', as described below:

- FirstChoice Wholesale Geared Global Share
- Acadian Wholesale Geared Sustainable Global Equity
- Colonial First State Wholesale Geared Index Global Share.

These options invest in companies listed on global stock exchanges, outside Australia, and because foreign companies do not pay franking credits, there are few or no franking credits to pass on to you. Therefore, there is no need to ensure that the option's income exceeds its expenses. Fixed gearing uses a target gearing level, with a usual tolerance either side of this level.

Option name	Target gearing	Tolerance
FirstChoice Wholesale Geared Global Share	33.3%	5%
Acadian Wholesale Geared Sustainable Global Equity	55%	5%
Colonial First State Wholesale Geared Index Global Share	55%	5%

The different target gearing gives investors a choice in the level of gearing available from the global options, from the lower risk 33.3% to the higher risk 55%.

We will not borrow additional amounts when the gearing is at the target level, but the gearing ratio may rise above the target due to declines in asset values or redemptions. If the gearing ratio exceeds the target level by more than the

tolerance of 5%, we take the gearing back below this level within a reasonable amount of time by repaying debt.

In the event of the gearing ratio exceeding 60% in the case of the FirstChoice Wholesale Geared Global Share, 65% for the Colonial First State Wholesale Geared Index Global Share options, or 75% in the case of the Acadian Wholesale Geared Sustainable Global Equity option, we will suspend the processing of redemption requests and distributions until the gearing has decreased to below these levels.

Return expectations of a geared option

The aim of gearing is to produce a higher return over the long term by using borrowed money in addition to your funds. However, for an option geared at 50%, if the underlying investments, rise is less than the option's borrowing and management costs, then it is unlikely that the geared option will outperform an equivalent ungeared portfolio. Consequently, a geared option will not always magnify market gains in a low return environment, although it will always magnify market losses.

We suggest you consult a financial adviser regarding the impact of these investments on your overall portfolio.

Short selling risk

What is short selling, a short position and a long position?

Short selling is selling a security you do not own. By short selling a security, an option attempts to profit from a decrease in the value of the security. Generally, short selling involves borrowing a security from another party to make the sale with the intention of repaying the borrowed security at a later date with an equivalent security purchased at a lower price. An option may use short selling as a strategy to try to improve returns and to manage risk.

A **short position** is a net position in a security that profits from a decrease in the value of the security. This can be achieved by short selling.

A **long position** is a net position in a security that profits from an increase in the value of the security. Generally, an investor adopts long positions by buying securities.

If an option uses short selling, it is detailed in the strategy of the option.

Emerging markets risk

Investing in emerging markets may involve a higher risk than investing in more developed markets. Emerging market securities may present market, credit, currency, liquidity, legal, political and other risks different from, and potentially greater than, the risks of investing in developed market countries.

For example, companies in emerging markets may not be subject to:

- accounting, auditing and financial reporting standards, practices and disclosure requirements comparable to those applicable to companies in major markets
- the same level of government supervision and regulation of stock exchanges as countries with more advanced securities markets.

Accordingly, certain emerging markets may not afford the same level of investor protection as would apply in more

developed jurisdictions. There are also risks that, while existing in all countries, may be higher in emerging markets due to the legal, political, business and social frameworks being less developed than those in more established market economies. Examples of higher risks include:

- political or social instability (including recession or war)
- institutional manipulation of currency or capital flows
- deflation, inflation, or loss in value of currency, and
- greater sensitivity to interest rates and commodity prices.

As a result, investment returns from emerging market securities are usually more volatile than those from developed markets. This means that there may be large movements in the unit prices of investment options that invest in emerging market securities over short or long periods of time. You should consider whether an investment option that invests in emerging market securities is suitable for your portfolio.

All investment options are subject to some or all of these risks, which can also vary from time to time. You should consult your financial adviser before making a decision to invest.

Your financial adviser is required to be qualified in understanding the risk and return associated with the wide range of investment options available to you and can help you make decisions regarding these options.

Are there any other risks you should be aware of?

When investing, there is the possibility that your investment goals will not be met. This can happen because of the risks discussed previously. It can also happen if your investment strategy is not aligned to your objectives.

How should you determine your investment timeframe?

Your financial adviser can help you determine your investment timeframe.

If you are mainly concerned about protecting your capital over a relatively short period of time, then a secure, cash-based investment may be the most suitable.

However, if you want the value of your investment to increase over a longer period, then growth assets like shares and property are likely to be included in your investment portfolio.

Although we have suggested minimum investment timeframes together with the Standard Risk Measure associated with each particular investment option, you should regularly review your investment decision with your financial adviser because your investment needs or market conditions may change over time. Our minimum suggested timeframes and the Standard Risk Measure associated with particular investment options should not be considered personal advice.

Investment category definitions

Investment category	Description
Cash and deposits	At-call deposits, term deposits and funds invested in money market securities
Enhanced cash	Funds investing in money market securities and some fixed interest securities
Australian fixed interest	Funds investing predominantly in domestic fixed interest securities
Diversified fixed interest	Funds investing in global fixed interest securities (or a combination of global and domestic)
Short duration fixed interest	Funds investing in domestic and/or global fixed interest securities with an absolute return focus, lower risk and minimal duration
Alternative income	Funds looking to generate a higher level of income, predominantly through investment in domestic and/or global fixed interest securities but also through certain income producing equities and alternatives, typically with an absolute return target with higher risk and expected return than Short duration fixed interest
Defensive	Funds with between 0–20% in growth assets and 80–100% in defensive assets
Conservative	Funds with between 21–40% in growth assets and 60–79% in defensive assets
Moderate	Funds with between 41–60% in growth assets and 40–59% in defensive assets
Growth	Funds with between 61–80% in growth assets and 20–39% in defensive assets
High growth	Funds with between 81–100% in growth assets and 0–19% in defensive assets
Diversified real return	Funds with a flexible allocation to growth assets and typically with an absolute return target
Australian share	Funds invested in Australian shares
Australian share – small cap	Funds invested in Australian small company shares
Global share	Funds invested in global shares, which can include thematic funds or funds that may incorporate shorting but which is not integral to their investment process
Global share – emerging markets	Funds invested in emerging markets, Asia ex Japan, emerging Asia, Asia Pacific ex Japan or China shares
Specialist share	Funds investing in specific sectors or regions, global small companies or long/short strategies
Geared funds	Funds which borrow to typically invest in Australian or global shares or other listed securities
Lower volatility share	Funds managed invested in shares with a lower volatility objective relative to the market, using quantitative techniques, equities option overlays or variable allocations to cash
Australian property and infrastructure securities	Funds investing into Australian property and/or infrastructure securities
Global property and infrastructure securities	Funds investing into global property and/or infrastructure securities
Alternatives	Funds may include, but are not limited to, absolute return funds, diversified hedge funds, global macro funds, commodity trading and currency funds

What are the main asset classes?

Cash

Cash generally refers to investments in bank bills, money market and similar securities which have a short investment timeframe. Cash investments generally provide a stable return, with low potential for capital loss.

Fixed interest

Investors in fixed interest securities, such as bonds, pay cash for the bond and in return receive a regular interest payment from the bond issuer at a fixed interest rate for an agreed period of time. The value of the bond can fluctuate based on interest rate movements, and when the bond matures the principal is repaid in cash. Publicly traded and private loans operate in a similar manner, however the interest payments received may be floating and not fixed rate – often priced with a margin above the risk free rate. Pricing of both fixed and floating securities is impacted by credit assessments, as well as the ability of borrowers to pay both interest and the principal at maturity. However, floating rate securities have less interest rate duration risk, meaning lower capital loss when interest rates are rising, and conversely lower capital gain when interest rates are falling, compared to fixed rate securities. Historically, bonds, fixed interest and floating rate securities have provided a more consistent but lower return than shares.

Property¹

Property refers to the physical land and buildings that are used by businesses and society to operate. Investment can involve holding, managing or developing property for a variety of purposes such as offices, industrial warehouses and retail shopping centres. Property investments typically involve a capital outlay in return for ongoing rents and appreciation in value over time. Property securities provide an indirect exposure to property, generally representing part ownership of a company or an entitlement to the assets of a trust. Property securities can be listed on a stock exchange or units of an unlisted trust.

Infrastructure²

Infrastructure refers to the physical assets required for a business or country to operate, including transportation, communication and utilities (e.g. water, sewage and electricity). It may also include 'social infrastructure' such as hospitals, prisons and public housing. Infrastructure investments typically have; high upfront capital requirements, low ongoing operational costs and relatively predictable cash flows and operating risks. Infrastructure securities provide an indirect exposure to infrastructure, generally representing part ownership of a company or an entitlement to the assets of a trust. Infrastructure securities can be listed on a stock exchange or units of an unlisted trust.

Shares

Shares represent a part ownership of a company and are generally bought and sold on a stock exchange or can be unlisted. Shares are generally considered to be more risky than the other asset classes because their value tends to fluctuate more than that of other asset classes. However, over the longer term they have tended to outperform the other asset classes.

¹ If an option invests in property or property securities, it is detailed in the strategy or allocation of the option.

² If an option invests in infrastructure or infrastructure securities, it is detailed in the strategy or allocation of the option.

A guide to your investment option risk profile

The main risks which can typically affect your investment options are outlined in the PDS. In addition to the general risks (ie market risk, security and investment-specific risk, management risk, liquidity risk, counterparty risk, legal, regulatory and foreign investment risk, environmental, social and governance (ESG) and climate risk and distribution risk) further option-specific risks are described. The table below identifies options that typically have exposure to these option-specific risks. Please note that the table is

not exhaustive and is a reference guide only. The relative importance of a risk to a particular option and whether or not an option-specific risk is applicable may differ from the table below and change from time to time. Options can have exposure to an option-specific risk at or after the date of this issue, and this may not be reflected in the table. Further details on option-specific risks are contained in the PDS and on pages 15 to 17.

1 This option is available to pre-retirement accounts and listed in the Application form with 'TTR' in the option name.

2 This option is not available in FirstChoice Investments.

3 This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

4 This option is not available in FirstChoice Wholesale Investments.

5 This option is only available in FirstChoice Wholesale Pension.

6 This option is only available in FirstChoice Wholesale Investments

FirstChoice Multi-Manager Multi-Sector options

FirstChoice Wholesale Defensive

Defensive

Objective¹ To provide relatively stable returns with low potential for capital loss. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.	Strategy To allocate 90% of the investments to defensive assets such as fixed interest and cash to provide the portfolio with relatively stable returns. 10% of the portfolio is allocated to growth assets, such as shares and property securities, to improve diversification and performance. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on emerging markets risk is provided on pages 16 to 17.	Allocation²  Benchmark (Range) 4.0% (0–10%) Australian shares 6.0% (0–10%) Global shares 60.0% (50–70%) Fixed interest and private debt 30.0% (20–40%) Cash and defensive alternatives
Minimum suggested timeframe At least 3 years		
Risk 		

FirstChoice Wholesale Conservative

Conservative

Objective¹ To provide relatively stable returns over the medium term with the potential for some long-term capital growth. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.	Strategy To allocate 70% of investments to defensive assets such as fixed interest and cash to provide the portfolio with relatively stable returns. 30% of the portfolio is allocated to growth assets, such as shares, property and infrastructure securities, to provide the potential for capital growth. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on emerging markets risk is provided on pages 16 to 17.	Allocation²  Benchmark (Range) 8.5% (0–20%) Australian shares 11.5% (5–25%) Global shares and private equity 13.0% (5–25%) Property, infrastructure, alternatives 49.5% (40–60%) Fixed interest and private debt 17.5% (10–30%) Cash and defensive alternatives
Minimum suggested timeframe At least 3 years		
Risk 		

FirstChoice Wholesale Diversified

Moderate

Objective¹ To provide a balance of income and capital growth over the medium-to-long term. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.	Strategy To allocate 50% of investments to growth assets such as shares, property and infrastructure securities and 50% to defensive assets such as fixed interest and cash. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on emerging markets risk is provided on pages 16 to 17.	Allocation²  Benchmark (Range) 15.5% (5–25%) Australian shares 22.75% (15–35%) Global shares and private equity 15.0% (5–25%) Property, infrastructure, alternatives 34.25% (25–45%) Fixed interest and private debt 12.5% (5–25%) Cash and defensive alternatives
Minimum suggested timeframe At least 5 years		
Risk 		

1 The option's composite benchmark is shown on page 93.

2 Cash holdings may be held on deposit with Commonwealth Bank of Australia.

3 Cash may include bank deposits and/or life company annuities.

FirstChoice Wholesale Moderate

Moderate

Objective¹

To provide a balance of income and capital growth over the medium-to-long term. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

To allocate 60% of investments to growth assets such as shares, property and infrastructure securities and 40% to defensive assets such as fixed interest and cash. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation²

Benchmark (Range)

19.0%	(10–30%)	Australian shares
27.5%	(20–40%)	Global shares and private equity
17.0%	(5–25%)	Property, infrastructure, alternatives
28.0%	(20–40%)	Fixed interest and private debt
8.5%	(0–15%)	Cash and defensive alternatives

FirstChoice Wholesale Balanced

Growth

Objective¹

To provide capital growth and income over the long term. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

To allocate 70% of investments to growth assets such as shares, property and infrastructure securities, and 30% to defensive assets such as fixed interest and cash. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation²

Benchmark (Range)

22.0%	(10–30%)	Australian shares
31.5%	(25–45%)	Global shares and private equity
21.0%	(10–30%)	Property, infrastructure, alternatives
21.0%	(10–30%)	Fixed interest and private debt
4.5%	(0–15%)	Cash

FirstChoice Wholesale Growth

Growth

Objective¹

To provide long-term capital growth with less fluctuations of returns than 'high growth' investment options. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

To allocate 80% of investments to growth assets such as shares, property and infrastructure securities and 20% to defensive assets such as fixed interest and cash. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation²

Benchmark (Range)

27.0%	(15–35%)	Australian shares
34.5%	(25–45%)	Global shares and private equity
23.0%	(15–35%)	Property, infrastructure, alternatives
14.5%	(5–20%)	Fixed interest and private debt
1.0%	(0–10%)	Cash

1 The option's composite benchmark is shown on page 93.

2 Cash holdings may be held on deposit with Commonwealth Bank of Australia.

3 Cash may include bank deposits and/or life company annuities.

FirstChoice Wholesale High Growth

High growth

Objective¹

To provide long-term capital growth by investing primarily in growth assets. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

To invest primarily in a diversified portfolio of shares, property and infrastructure securities. In order to provide further diversification, the portfolio is allocated across a number of leading investment managers. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

34.0%	(25–45%)	Australian shares
45.0%	(35–55%)	Global shares and private equity
20.0%	(10–30%)	Property, infrastructure, alternatives
1.0%	(0–5%)	Cash

FirstChoice Wholesale Geared Growth Plus

Geared

Objective¹

To magnify long-term returns by borrowing to invest in growth assets. To outperform the option's composite benchmark over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

To allocate 90% of investments to a diversified portfolio of shares, property and infrastructure securities. In order to provide further diversification, the portfolio is allocated across a number of leading investment managers. The portfolio will also allocate 10% to investments designed to generate additional income and to further diversify returns. Income from investments is used to pay the costs of gearing. The option utilises gearing to magnify returns from underlying investments. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on gearing risk and emerging markets risk is provided on pages 15 to 17.

Note: A geared option will not always magnify gains (particularly in a low return environment), but will always magnify losses. Investors will therefore experience increased volatility in the value of their investment. This means that investors may have potentially large fluctuations both up and down in the value of their investments.

Allocation

Benchmark (Range)

33.5%	(25–45%)	Australian shares
36.5%	(25–45%)	Global shares
20.0%	(10–30%)	Property, infrastructure, alternatives
10.0%	(0–15%)	Yield ²

¹ The option's composite benchmark is shown on page 93.

² Acadian Asset Management (Australia) is the manager in this allocation (at 22 May 2023).

FirstChoice Lifestage

FirstChoice Lifestage 1945–49

Objective To achieve a return of Consumer Price Index (CPI) plus 1.0% per annum over rolling three-year periods after fees and taxes.	Objective Effective from 30 June 2023 To achieve a return of Consumer Price Index (CPI) plus 1.0% per annum over rolling five-year periods after fees and taxes.	Strategy To invest in a diverse range of assets that are expected to generate a mix of income and long-term capital growth with an emphasis on stable returns. The option may use derivatives with the objective of managing portfolio volatility. The portfolio aims to hedge currency risk except for part of the allocation to global shares (which may include emerging market shares). 1 As we actively manage the asset allocation, the asset allocation of an individual Lifestage option may vary over time. The current asset allocation is set out within the Investment Option Profiles on the Performance & Prices page at cfs.com.au/personal/resources/funds-and-performance.

2 Note: As part of strategic asset allocation, investment allocation within 'Cash and Defensive Alternatives' for each individual Lifestage option may vary over time where up to 100% of the total allocation may be to either cash or defensive alternatives.

3 These ranges are effective from 30 June 2023.

FirstChoice Lifestage 1960–64

Objective To achieve a return of Consumer Price Index (CPI) plus 1.5% per annum over rolling five-year periods after fees and taxes.	Objective Effective from 30 June 2023 To achieve a return of Consumer Price Index (CPI) plus 1.5% per annum over rolling seven-year periods after fees and taxes.	Strategy To invest in a diverse range of assets that are expected to generate a mix of long-term capital growth and income. The strategy seeks to reduce volatility of returns, and over time the portfolio's exposure to assets with volatile returns will be reduced to provide greater short-term security. The option may use derivatives with the objective of managing portfolio volatility. The portfolio aims to hedge currency risk except for part of the allocation to global shares (which may include emerging market shares). Important information on emerging markets risk is provided on pages 16 and 17.																		
Minimum suggested timeframe At least 5 years	Minimum suggested timeframe Effective from 30 June 2023 At least 7 years

FirstChoice Multi-Manager Single Sector options

FirstChoice Wholesale Fixed Interest

Diversified fixed interest

<p>Objective To provide relatively stable returns with low potential for capital loss by investing in Australian and global fixed interest securities. To outperform the composite benchmark of 50% Bloomberg Global Aggregate Index, hedged to Australian dollars and 50% Bloomberg AusBond Composite 0+Yr Index over rolling three-year periods before fees and taxes.</p> <p>Minimum suggested timeframe At least 3 years</p> <p>Risk</p> 	<p>Strategy To invest in a diversified portfolio of government and corporate bonds that aims to deliver relatively stable returns with less fluctuation than investing in shares and property. The investments are managed by a number of leading active fixed interest managers who aim to outperform the index. This is designed to deliver more consistent returns with less risk than would be achieved if investing with a single investment manager. The portfolio aims to hedge currency risk.</p>	<p>Underlying investment managers (at 22 May 2023)</p> <div>   </div> <div>   </div> <div>   </div> <p>WELLINGTON MANAGEMENT®</p>

FirstChoice Wholesale Geared Australian Share

Geared

Objective To magnify long-term returns from capital growth by borrowing to invest in predominantly Australian companies. To outperform the S&P/ASX 300 Accumulation Index over rolling seven-year periods before fees and taxes.	Strategy To invest in a diversified portfolio of predominantly Australian companies. The investments are managed by combining the portfolios of a number of Australian share managers to provide an actively managed, diversified portfolio. The option utilises gearing to magnify returns from underlying investments.	Underlying investment managers (at 22 May 2023) <div> <div>ACADIAN</div> <div>T.RowePrice®</div> <div>alphinity</div> <div>Tyndall</div> <div>LONGREACH ALTERNATIVES</div> </div>
Minimum suggested timeframe At least 7 years	Important information on gearing risk is provided on pages 15 to 16.	
Risk 	Note: A geared option will not always magnify gains (particularly in a low return environment), but will always magnify losses. Investors will therefore experience increased volatility in the value of their investment. This means that investors may have potentially large fluctuations both up and down in the value of their investments.	

Objective

To magnify long-term capital growth by borrowing to invest in a diversified portfolio of global shares. The option aims to outperform the MSCI All Country World ex Australia Index (net dividends reinvested), in Australian dollar terms over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

To invest in a diversified portfolio of companies. The investments are managed by combining the portfolios of a number of leading global share managers to provide an actively managed, diversified portfolio. The option utilises gearing to magnify returns from underlying investments. Investors' capital in the option is not hedged, but the option may hedge up to 100% of the currency exposure relating to the borrowings of the option.

Important information on emerging markets risk and gearing risk is provided on pages 15 to 17.

Note: A geared option will not always magnify gains (particularly in a low return environment), but will always magnify losses. Investors will therefore experience increased volatility in the value of their investment. This means that investors will have potentially large fluctuations both up and down in the value of their investments.

CFS ETF Exposure Series

CFS ETF Exposure Series: Physical Gold (wholesale only)

Alternatives

Objective

The option will invest predominantly (generally 92-98%) in an exchange traded product (ETP). The selected ETP aims to closely track the gold price with the aim of generating comparable returns (before taxes and fees) over rolling one-year periods. The option aims to closely track a Custom Benchmark (95% Gold Price in AUD and 5% Reserve Bank of Australia cash rate) before fees and taxes over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option will hold units in an ETP and cash, CFS will target 95% exposure to the underlying ETP and the option will generally have exposure to the ETP within ranges of 92-98%. CFS has selected the GlobalX Physical Gold (ASX:GOLD) ETP issued by Global X Management (AUS) Limited (Global X).

Global X has adopted a passive investment strategy for establishing and managing the Global X Physical Gold. The ETP provides investors with a beneficial interest in physical gold bullion. Gold bullion is quoted and traded in USD and the ETP is not currency hedged.

Allocation

CFS ETF Exposure Series: All-World ex-US Shares (wholesale only)

Global share

Objective

The option will invest predominantly (generally 92-98%) in an exchange-traded product (ETP). The selected ETP aims to track a broad index benchmark (FTSE All-World ex US Index) of shares listed on stock exchanges outside of the US (before taxes and fees). The option aims to closely track a Custom Benchmark (95% FTSE All-World ex US Index and 5% Reserve Bank of Australia cash rate) before fees and taxes over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option will hold units in an ETP and cash, CFS will target 95% exposure to the underlying ETP and the option will generally have exposure to the ETP within ranges of 92-98%. CFS has selected the Vanguard All-World Ex-US Shares Index ETF (ASX VEU) issued by Vanguard Investments Australia Limited (Vanguard).

Vanguard has adopted a passive investment strategy and aims to track the underlying index. The underlying index is a rules based market capitalisation weighted equity index comprising the large and mid-cap sectors of developed and emerging markets, excluding the US, as defined by FTSE Russell. The ETF invests in US dollar terms and is not currency hedged.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

CFS ETF Exposure Series: US Shares (wholesale only)

Global share

Objective

The option will invest predominantly (generally 92-98%) in an exchange-traded product (ETP). The selected ETP aims to track a broad index benchmark (S&P 500 Index) of shares listed on US stock exchanges (before taxes and fees). The option aims to closely track a Custom Benchmark (95% S&P 500 Index and 5% Reserve Bank of Australia cash rate) before fees and taxes over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option will hold units in an ETP and cash, CFS will target 95% exposure to the underlying ETP and the option will generally have exposure to the ETP within ranges of 92-98%. CFS has selected the iShares® S&P 500 (ASX:IVV) ETP issued by BlackRock Investment Management (Australia) Limited (BlackRock).

BlackRock has adopted a passive investment strategy and aims to track the underlying index. The underlying index is an established market capitalisation weighted US equity index and is widely used to measure the performance of large-cap equities listed on US stock exchanges, as defined by S&P Dow Jones Indices. The ETF is not currency hedged.

Allocation

Colonial First State Enhanced Index Series options

Colonial First State Wholesale Enhanced Index Conservative

Conservative

Objective¹ To provide relatively stable returns over the medium term with the potential for some long-term capital growth. To outperform the option's composite benchmark over rolling three-year periods before fees and taxes.	Strategy The option allocates 70% of investments to defensive assets such as fixed interest and cash to provide the portfolio with relatively stable returns. The fixed interest component includes broadly diversified allocations to government bonds and credit. 30% of the portfolio is allocated to growth assets such as shares and property and infrastructure securities to provide potential for capital growth. The shares component is managed using an approach aiming to deliver long term returns above that of market capitalisation indices. The property and infrastructure components are managed to closely match the returns of relevant market capitalisation indices. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk except for the allocation to emerging market shares and part of the allocation to global shares. Important information on emerging markets risk is provided on pages 16 to 17. Colonial First State Wholesale Index Balanced (wholesale only)

Growth

Objective

To provide capital growth and income over the long term. To closely track the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

The option allocates 70% of investments to growth assets such as shares, property and infrastructure securities to provide potential for capital growth. The growth assets are managed using market capitalisation indices. 30% of the portfolio is allocated to defensive assets such as fixed interest and cash to provide the portfolio with relatively stable returns. The fixed interest component is managed on a traditional index basis while the cash component may include money market securities, bank deposits and annuities. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk, except for a part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

27.0%	(15–30%)	Fixed interest
3.0%	(0–15%)	Cash

Colonial First State Wholesale Index Growth (wholesale only)

Growth

Objective¹

To provide long-term capital growth with less fluctuations of returns than 'high growth' investment options. To closely track the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

The option allocates 80% of investments to growth assets such as shares, property and infrastructure securities to provide potential for capital growth. The growth assets are managed using market capitalisation indices. 20% of the portfolio is allocated to defensive assets such as fixed interest and cash to provide the portfolio with relatively stable returns. The fixed interest component is managed on a traditional index basis while the cash component may include money market securities, bank deposits and annuities. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk, except for a part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

30.0%	(20–40%)	Australian shares
36.0%	(25–45%)	Global shares
7.0%	(0–15%)	Global property securities
7.0%	(0–15%)	Global infrastructure securities
19.0%	(10–20%)	Fixed interest
1.0%	(0–10%)	Cash

Colonial First State Wholesale Index High Growth (wholesale only)

High growth

Objective

To provide long-term capital growth by investing primarily in growth assets. To closely track the option's composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option invests primarily in a diversified portfolio of shares and property and infrastructure securities to provide potential for capital growth. The assets are managed using market capitalisation indices. Allocations to asset classes will generally align to the benchmark but the option may adjust its exposure within the allocation ranges in response to changes in risk and return expectations. The portfolio aims to hedge currency risk, except for a part of the allocation to global shares.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

35.0%	(25–45%)	Australian shares
44.0%	(35–55%)	Global shares
10.0%	(0–20%)	Global property securities
10.0%	(0–20%)	Global infrastructure securities
1.0%	(0–5%)	Cash

Colonial First State Wholesale Index Australian Bond (wholesale only)

Australian fixed interest

Objective

To closely track the Bloomberg AusBond Composite 0+Yr Index with the aim of generating returns (before taxes and fees and assuming income is reinvested) comparable to the Australian bond market, as measured by that benchmark, over rolling one-year periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option is a passively managed portfolio of bonds which is designed to replicate the benchmark's performance and risk characteristics.

Allocation

Benchmark

100% Cash and fixed interest

Colonial First State Wholesale Index Global Bond (wholesale only)

Diversified fixed interest

Objective

To closely track the Bloomberg Global Aggregate Index, hedged to Australian dollars, with the aim of generating returns (before taxes and fees and assuming income is reinvested) comparable to global government bond markets as measured by that benchmark over rolling one-year periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

Detailed risk analysis is used to design a portfolio of bonds which provides the greatest likelihood of matching the performance of the Bloomberg Global Aggregate Index, hedged to Australian dollars. This option aims to hedge currency risk.

Allocation

Benchmark

100% Cash and fixed interest

Colonial First State Wholesale Index Australian Share

Australian share

Objective

To closely track the S&P/ASX 300 Accumulation Index with the aim of generating returns (before taxes and fees and assuming income is reinvested) comparable to the Australian sharemarket as measured by that benchmark over rolling one-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Detailed risk analysis is used to design a portfolio of shares which provides the greatest likelihood of matching the performance of the S&P/ASX 300 Accumulation Index. All shares in this option are maintained within a very close margin to their weight in the Index. The option predominantly invests in Australian companies and therefore does not hedge currency risk.

Colonial First State Wholesale Index Global Listed Infrastructure Securities (wholesale only)

Global property and infrastructure securities

Objective

To closely track the FTSE Developed Core Infrastructure Index, hedged to Australian dollars with the aim of generating returns (before taxes and fees and assuming income is reinvested) comparable to listed global property markets as measured by that benchmark over rolling one-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Detailed risk analysis is used to design a portfolio of shares which provides the greatest likelihood of matching the performance of the FTSE Developed Core Infrastructure Index, hedged to Australian dollars. This option aims to hedge currency risk.

Allocation

Benchmark

100% Global infrastructure securities
0% Cash

Colonial First State Wholesale Geared Index Australian Share

Geared

Objective

To magnify long-term capital growth by borrowing to invest in predominantly Australian companies. The option aims to outperform the S&P/ASX 100 Accumulation Index over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

This option uses detailed risk analysis to design a portfolio of shares that provides the greatest likelihood of matching the performance of the S&P/ASX 100 Accumulation Index. All shares in this option are maintained within a very close margin to their weight in the index. The option predominantly invests in Australian companies and therefore does not hedge currency risk. The option utilises gearing to magnify returns from underlying investments.

Allocation

Benchmark

100% Australian shares
0% Cash

Colonial First State Wholesale Geared Index Global Share

Geared

Objective

To magnify long-term capital growth by borrowing to invest in a diversified portfolio of global shares. The option aims to outperform the MSCI All Country World (ex Australia) Index in Australian dollar terms over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

This option uses detailed risk analysis to design a portfolio of shares that provides the greatest likelihood of matching the performance of the MSCI All Country World (ex Australia) Index. The option utilises gearing (borrowing) to magnify returns from underlying investments. The option does not hedge investors' capital but may hedge up to 100% of the currency exposure relating to the borrowings.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark

100% Global shares
0% Cash

Other Multi-Sector options

Acadian Wholesale Defensive Income

Alternative income

Objective

To provide investment returns in excess of the Reserve Bank of Australia cash rate over rolling three-year periods before fees and taxes, with a relatively low degree of volatility. This will be achieved by combining cash and fixed interest investments with long and short equity holdings chosen using Acadian Australia's equity investment process. Sophisticated portfolio construction techniques will be used to implement this in a way that limits equity market exposure.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option's strategy is to adopt an active approach to managing a portfolio of money market and fixed income securities along with stocks listed on the Australian Securities Exchange. The majority of assets will be actively invested in high quality money market securities with short duration. The option will then seek to enhance returns by taking long and short positions in securities generally listed on the Australian Securities Exchange. Acadian will dynamically manage the exposure of the long/short component of the portfolio, with the net market exposure being typically close to 0%. The long/short structure aims to minimise equity market risk whilst benefiting from franking credits and Acadian Australia's sophisticated analytical models for stock selection.

Important information on short selling risk is provided on page 16.

Allocation

Benchmark

0% Australian shares
100% Cash and fixed interest

First Sentier Wholesale Target Return Income

Alternative income

Objective

To actively manage investor capital to target a total return of 2–2.5% pa above the Reserve Bank of Australia cash rate over three years (including franking) after fees and before taxes by investing across income producing assets including cash, bonds, capital notes and equity income strategies. The option will aim to pay an annual income in the region of 5% out of its total return.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

The option manages a broad opportunity set of income producing investments, actively adjusting the investment mix to achieve the target return under all market conditions.

The investment style is an active, research-driven decision making process that seeks to construct a portfolio of the best ideas across the capital structure incorporating interest rate, inflation, government, credit, capital note and equity income strategies. These diversified sources of income and return are managed in a risk-aware framework to achieve the investment objectives with a low degree of volatility and minimal risk of capital loss.

The option provides daily liquidity and is managed from the perspective of an Australian investor, thereby incorporating the benefits of franking credits. Derivatives may be used for risk management or return enhancement. The option aims to hedge currency exposure.

Allocation

Benchmark

0% Australian shares, global property securities and global listed infrastructure securities
100% Capital notes, cash and fixed income

A performance fee may apply of 10% of the net return (after management fees), grossed up for Australian imputation credits, above the Reserve Bank of Australia cash rate plus 0.5% (inclusive of the net effect of GST and any related GST credits). For more information on the performance fee, refer to the fees section in the PDS.

This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

Pendal Wholesale Monthly Income Plus

Alternative income

Objective

The option aims to provide a return (before fees and taxes) that exceeds the Reserve Bank of Australia cash rate over rolling three-year periods while allowing for some capital growth to reduce the impact of inflation.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

This option is designed for investors who want the potential for regular income and some long-term capital growth. The option invests in a number of income generating strategies across the fixed interest, shares and cash asset classes.

Pendal's investment process is designed to provide a flexible approach to asset allocation. This is aimed at preserving capital and minimising the occurrence of adverse income outcomes.

Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives can also be used to gain exposure to assets and markets. The option does not hedge currency risk.

Allocation

Benchmark

N/A Cash
N/A Fixed interest
N/A Australian shares

AZ Sestante Wholesale Conservative

Conservative

Objective

To provide relatively stable returns over the medium term with the potential for some long-term capital growth. To deliver a return in excess of CPI plus 2% per annum over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option's broad asset allocation is to be 30% exposed to growth assets such as shares, property and infrastructure securities and 70% to defensive assets such as fixed interest and cash. The actual asset allocation will vary from this, as the manager uses a tactical asset allocation approach to optimise expected risk and return outcomes for the portfolio. In order to provide additional diversification, the portfolio is allocated across a number of leading investment managers. The option may hedge its currency exposure. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Ranges

3% – 23%	Australian shares
2% – 22%	Global shares
1% – 15%	Property and infrastructure securities
0% – 10%	Alternatives
30% – 50%	Fixed income
20% – 40%	Cash

Context Capital Wholesale Short Term

Conservative

Objective

To achieve a return of CPI +1.0% per annum, after fees and costs and before taxes, over rolling three-year periods, while aiming to minimise the incidence of negative returns greater than 5% over any 12-month period.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option will be invested with the following investment philosophy; quality focused; rebalancing adds value; active when its exceptional; keep it simple; buckets work best; use relevant measures of risk and value for money. The option will be invested across a diverse mix of asset classes including Australian and International equities, property, infrastructure, fixed interest, alternative investments, and cash. Investment exposure will be obtained through ASX listed exchange traded products and managed funds. The option has been purpose built around the investment philosophy above and to be part of a bucketing approach to managing wealth. This option is designed to be used for short term spending requirements. The option may hedge some of its currency risk. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

25.0%	(10–50%)	Cash

First Sentier Wholesale Conservative

Conservative

Objective¹

To provide long-term capital preservation with an income focus. The option aims to outperform the composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option's broad asset allocation is to be 30% invested in growth assets (shares and property securities) and 70% in defensive assets (fixed interest and cash). Allocations are reviewed regularly although a reallocation is only considered in response to a fundamental change in long-term expectations or market demand. The option aims to add value through a disciplined approach to the selection of the investments held by the option. Derivatives may be used for risk management. The option may hedge some or all of its currency exposure. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

15%	(10–20%)	Australian shares
10%	(5–15%)	Global shares
5%	(0–10%)	Property securities
70%	(60–80%)	Fixed interest and cash

1 This option's composite benchmark is shown on page 95.

2 The Australian shares asset allocation primarily invests in Australian listed shares, and may have up to 20% exposure to stocks outside of Australia.

3 The allocation to Global shares may include exposure to emerging markets.

Perpetual Wholesale Conservative Growth

Conservative

Objective¹

To provide moderate growth over the medium term and income through investment in a diversified portfolio with an emphasis on cash and fixed income securities. The option aims to outperform CPI + 3.5% pa (before fees and taxes) over at least two-year periods and to outperform its composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

Perpetual invests in a diverse mix of growth, defensive and other assets with a focus on cash, enhanced cash and fixed income securities. Tactical asset allocation strategies may be applied, which involves the option adjusting its exposure to asset classes on a regular basis within the allocation ranges. Currency is managed at the option level, taking into account currency exposure arising from underlying investments. Currency management is used to either hedge currency for an existing position or create an exposure to a foreign currency. Exposure to foreign currency will be limited to 50% of the gross asset value of the option. Derivatives and exchange traded funds may be used.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

11.0%	(0–25%)	Australian shares ²
10.0%	(0–20%)	Global shares ³

3 The allocation to global shares may include exposure to emerging markets.

Evidentia Wholesale Medium Term

Moderate

Objective¹ The option has a primary objective to preserve capital over a rolling three-year period and a secondary objective to exceed a return of CPI+2.0% per annum over this period, after fees and before taxes.	Strategy The option is actively managed using a dynamic approach to asset allocation. The strategic asset allocation aims to have exposure to 50% growth assets and 50% defensive assets. The strategy is designed to provide a funding source for medium term cashflow requirements (three to seven years). The option is managed with the aim of providing a higher level of downside protection relative to the benchmark and capital preservation over the investment time horizon. Capital preservation however is not guaranteed. Manager selection is then based on two distinct steps. Firstly, the efficiency of each asset class is assessed to determine whether active or passive investments are used. Secondly, managers are assessed on a quantitative and qualitative basis, selecting managers that are believed to best meet the investment objective. Managers are selected based on their perceived ability to generate excess returns over the benchmark and their ability to provide downside protection in down markets. The option may hedge some of its currency risk. Important information on emerging markets risk is provided on pages 16 to 17.	Allocation  Benchmark (Range) 19% (5–35%) Australian shares 25% (10–40%) Global shares 6% (0–20%) Property and infrastructure securities 0% (0–30%) Alternatives 0% (0–30%) Diversified 40% (10–65%) Fixed income 10% (0–40%) Cash

Pendal Wholesale Sustainable Balanced

Growth

Objective¹

The option aims to provide a return (before fees and expenses) that exceeds the option's composite benchmark over rolling three-year periods.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

Sustainable and ethical investment practices are incorporated into the Australian and international shares, Australian fixed interest and part of the alternative investments components of the option. All other investments by the option are not assessed for sustainable and ethical investment practices. Pendal actively seeks exposure to securities and industries that demonstrate leading environmental, social and corporate governance (ESG) and ethical practices and exclude companies not meeting the investable criteria. Pendal actively engages with the management of the companies and issuers they invest in to manage risk, effect change and realise potential value over the long term. In addition, Pendal excludes from the option some types of companies and industries which are materially involved in activities it considers contrary to the ethical and ESG goals of the option, including industries such as: fossil fuels, uranium, logging, gambling, pornography, weapons, alcohol, tobacco, animal testing, and predatory lending. These exclusions may be applied differently across the asset classes of the option. The option may hedge a portion of its currency exposure. The option may use derivatives to achieve its investment objective and to gain exposure to assets and markets. Derivatives may also be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark (Range)

29%	(20–40%)	Australian shares

1 This option's composite benchmark is shown on page 95.

2 The Australian shares asset allocation primarily invests in Australian listed shares, and may have up to 20% exposure to stocks outside of Australia.

3 The allocation to global shares may include exposure to emerging markets.

Perpetual Wholesale Balanced Growth

Growth

Objective¹

To provide long-term capital growth and income through investment in a diversified portfolio with an emphasis on Australian and international share investments. The option aims to outperform CPI + 5% pa (before fees and taxes) over at least five-year periods and to outperform its composite benchmark over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

Perpetual invests in a diverse mix of growth, defensive and other assets with a focus on Australian and international shares. Tactical asset allocation strategies may be applied, which involves the option adjusting its exposure to asset classes on a regular basis within the allocation ranges. Currency is managed at the option level, taking into account currency exposure arising from underlying investments. Currency management is used to either hedge currency for an existing position or create an exposure to a foreign currency. Exposure to foreign currency will be limited to 50% of the gross asset value of the option. Important information on emerging markets risk is provided on pages 16 to 17.

Perpetual Wholesale Diversified Real Return

Diversified real return

Objective¹

The option aims to target a pre-tax return of inflation plus 5% per annum (before fees and taxes) above the All Groups Consumer Price Index (CPI) over rolling five-year periods, while minimising downside risk.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

The option will invest in a diversified range of asset classes. The combination of assets held by the option at any time are those which Perpetual believe provide the greatest probability of achieving the target return over rolling five-year periods. Perpetual may adjust the option's asset allocation to respond to changing market conditions and/or to take advantage of new opportunities.

In managing the option to meet its investment objective, the option may implement a considerable amount of its exposures via derivatives and may include alternative and private market assets.

Currency is managed at the option level, taking into account currency exposure arising from underlying investments. Currency management is used to either hedge currency for an existing position or create an exposure to a foreign currency. Net foreign currency exposure will be limited to 50% of the gross asset value of the option.

Important information on emerging markets risk is provided on pages 16 to 17.

Schroder Wholesale Real Return

Diversified real return

Objective

To deliver an investment return of 5% pa before fees and taxes above inflation over rolling three-year periods. Inflation is defined as the Reserve Bank of Australia's Trimmed Mean, as published by the Australian Bureau of Statistics.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

Schroder Real Return has an objective based multi-asset investment strategy which uses a dynamic approach to asset allocation to take full advantage of the opportunities presented in the market. The diverse nature of the option's investment universe and broad investment ranges ensures that it has the flexibility to effectively and efficiently allocate to and select those assets that in combination target the greatest probability of achieving the option's investment objective in all market environments.

The option may also use derivatives and active currency management as part of the overall investment strategy. Important information on emerging markets risk is provided on pages 16 to 17.

No minimum

Risk

Information for FirstChoice Wholesale Pension investors only

Strategy

To invest in a bank deposit product offered by Commonwealth Bank of Australia.

Allocation

Current interest rates for FirstRate Cash Non-Auto-rebalancing are available on the Colonial First State website or by contacting us.

FirstRate Wholesale Saver

Cash and deposits

Objective

To provide positive interest income each month and very low risk by depositing funds with Commonwealth Bank of Australia. For the interest rate, please visit cfs.com.au/personal/resources/funds-and-performance/firstrate-interest-rates.html.

Minimum suggested timeframe

No minimum

Risk

Information for FirstChoice Wholesale Personal Super and FirstChoice Wholesale Pension investors only

Strategy

To invest in a bank deposit product offered by Commonwealth Bank of Australia.

Allocation

Current interest rates for FirstRate Wholesale Saver are available on the Colonial First State website or by contacting us.

FirstRate Wholesale Term Deposits

Cash and deposits

Objective

To provide positive interest income at a fixed rate for the relevant term and very low risk by depositing funds with Commonwealth Bank of Australia.

Minimum suggested timeframe

No minimum

Early withdrawal adjustments may apply; refer to the PDS for the product you wish to invest in or are otherwise considering.

Risk

Offering a range of terms from three months to 5 years with a choice of interest payment options (information for FirstChoice Wholesale Personal Super and FirstChoice Wholesale Pension investors only)

Strategy

To invest in a fixed rate term deposit product offered by Commonwealth Bank of Australia. Current interest rates for FirstRate Wholesale Term Deposits are available on the Colonial First State website or by contacting us.

Allocation

Note: For important information that you should consider when establishing or transacting on FirstRate Wholesale Term Deposits, refer to the Reference Guide for the product you wish to invest in or are otherwise considering, available at cfs.com.au or by calling 13 13 36.

CFS Enhanced Cash

Enhanced cash

Objective

To provide stable returns with very low risk of capital loss by predominantly investing in money market securities and bank deposits. To outperform the Bloomberg AusBond Bank Bill Index over rolling one-year periods before fees and taxes.

Minimum suggested timeframe

No minimum

Risk

Strategy

To invest in a diversified portfolio of money market securities, bank deposits and annuities to deliver stable returns. The investments are managed by leading cash managers and on deposit with Australian banks.

Allocation

First Sentier Wholesale Strategic Cash

Enhanced cash

Objective

To provide a regular income stream from investments in money market securities with a very low risk of capital loss. The option aims to outperform the returns of Australian money markets over rolling three-year periods as measured by the Bloomberg AusBond Bank Bill Index before fees and taxes.

Minimum suggested timeframe

No minimum

Risk

Strategy

The option's strategy is to invest in high quality money market securities (including asset backed securities), with predominantly short maturities, to achieve a very stable income stream. The option invests in assets that offer value-for-risk by taking into account economic analysis and market trends. Derivatives may be used for risk management.

Allocation

Note: This option is used for the SuperFirst Transfer Facility as outlined in the Reference Guide – FirstChoice Wholesale Personal Super and Pension, available online at colonialfirststate.com.au/fcwpen or by calling 13 13 36.

First Sentier Wholesale Global Credit Income

Short duration fixed interest

Objective

To provide income-based returns and to outperform the Bloomberg AusBond Bank Bill Index over rolling three-year periods before fees and taxes by investing in a diversified portfolio of relatively higher yielding Australian and international fixed interest investments.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option invests in a portfolio of predominantly global credit securities. The option's strategy is to earn an income return from its investments, controlling risk through careful selection and monitoring, combined with broad diversification. The increased credit risk of credit securities means that these investments have the potential to deliver higher returns over the medium term compared to cash. Derivatives may be used for risk management or return enhancement. The option aims to hedge currency exposure.

Allocation

0%	Range	100%	Benchmark
		100%	100% Cash and fixed interest

Franklin Wholesale Australian Absolute Return Bond

Short duration fixed interest

Objective

The investment objective of the option is to provide investors with access to an actively managed portfolio of fixed income strategies with an aim to deliver returns in excess of the Bloomberg AusBond Bank Bill Index, after fees and expenses (but before taxes), over rolling three-year periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option is an actively managed absolute return fixed income portfolio designed to deliver attractive returns through the interest rate and credit cycles while protecting against capital volatility through strong risk management. The option seeks to achieve its investment objective by primarily investing in Australian dollar and non Australian dollar-denominated fixed income instruments and debt obligations of government, government related issuers (including supranational organisations supported by several national governments) and corporations worldwide. The option seeks to take advantage of fixed income opportunities in domestic markets and select strategies from the broader global universe, as well, including emerging markets.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

0%	Range	100%	Benchmark
		0-100%	N/A Cash
		0-100%	N/A Investment grade fixed income
		0-20%	N/A High yield

Kapstream Wholesale Absolute Return Income

Short duration fixed interest

Objective

To provide investors with a diversified exposure to fixed interest with an absolute return focus. The option aims to consistently deliver capital stability and a reliable income stream and outperform its composite benchmark (50% Bloomberg AusBond Bank Bill Index and 50% Bloomberg AusBond Composite 0-3 Yr Index) over rolling three-year periods before fees and taxes through active diversification across sectors and geographies.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

Kapstream applies a distinctive approach to fixed income investments, actively allocating between specific investment strategies on an ongoing basis. Kapstream's active and flexible approach, when combined with the option's investment universe, enables the option to generally deliver positive returns to investors over time.

Kapstream seeks out value across sectors and geographies, identifying strategies priced for the best return potential in the current market environment. This means that Kapstream can take advantage of unique opportunities within countries and sectors that are often overlooked or under-represented in market indices. As a result, Kapstream aims to generate positive returns through market cycles. It manages total portfolio risk, rather than index risk, so the option can deliver capital stability with a regular income stream. The result is the potential for consistent positive returns, with less risk. The option aims to hedge currency risk.

Allocation

0%	Range	100%	Benchmark
		100%	100% Cash and fixed interest (including derivatives) ¹

¹ Includes derivatives and is broken down as follows: investment grade securities 85-100% and non-investment grade securities 0-15%.

Macquarie Wholesale Income Opportunities

Short duration fixed interest

Objective

To outperform the Bloomberg AusBond Bank Bill Index over rolling three-year periods before fees and taxes. It aims to provide higher income returns than traditional cash investments at all stages of interest rate and economic cycles by investing in the full spectrum of credit based securities including global credit based securities.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option predominantly provides exposure to a wide range of domestic and global investment grade floating and fixed rate instruments, asset-backed securities, and cash. The option may also have opportunistic exposure to other fixed income sectors and instruments such as, high yield and emerging markets debt as well as other fixed income instruments (such as hybrid securities). Interest rate risk will generally be hedged through the use of derivatives such as swaps and futures. The option is generally hedged to Australian dollars, however exposure to emerging markets debt issued in the local currency of the debt will generally be unhedged. Small active currency positions may also be taken, for example when there are opportunities to add value or hedge risks in the portfolio.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark

N/A	Investment grade fixed income
N/A	High yield
N/A	Emerging market debt
N/A	Cash

Mutual Wholesale Income

Short duration fixed interest

Objective

The option aims to achieve superior outcomes across two investment objectives; to provide a greater total return than the Bloomberg AusBond Bank Bill Index (benchmark), after fees and before taxes, over a rolling 12-month period and provide income greater than its benchmark quarterly.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option actively manages a portfolio of debt instruments offered by Australian ADI's with a minimum 60% exposure to ANZ, CBA, NAB and WBC.

Mutual's investment process is based on using bottom-up fundamental analysis to determine the relative value and appropriateness of the various Australian bank bonds available within the market.

The cornerstone of Mutual's investment philosophy is security with performance. The Manager's research process places its emphasis on mitigating downside risks by attempting to provide investors with a high level of capital preservation and outperforming the Bloomberg Index, while generating excess net cash returns to investors.

The option gains exposure by investing in the underlying Mutual Income Fund via buying and selling units.

Allocation

Perpetual Wholesale Diversified Income

Short duration fixed interest

Objective

To provide investors with regular income and consistent returns above the Bloomberg AusBond Bank Bill Index over rolling three-year periods (before fees and taxes) by investing in a diverse range of income generating assets.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option's approach to delivering returns and managing risk is through an active and risk aware investment process which predominantly invests in a diversified core portfolio of liquid investment grade credit securities. Perpetual believes these assets provide investors with protection in times of market stress.

When the environment is supportive Perpetual seeks to enhance returns by taking more risk whether that be in maturity, credit rating or subordination. The option can also invest in alternative income generating securities such as mortgages, infrastructure debt and private debt. This approach to portfolio construction is Perpetual's preferred method to deliver investors the highest possible risk adjusted returns. Derivatives may be used in managing this option. The option aims to hedge currency risk.

Allocation

Benchmark

100%	Cash and credit
------	-----------------

PM Capital Wholesale Enhanced Yield

Short duration fixed interest

Objective

To provide investment returns in excess of the Reserve Bank of Australia cash rate by tactically investing the majority of assets in a combination of cash and yield securities with a minor allocation to low volatility equity strategies. The option aims to outperform the Reserve Bank of Australia cash rate over rolling two-year periods after fees and taxes, with a low degree of volatility and minimal risk of capital loss. The option is managed from an Australian investor's perspective, where tax (including imputation credits and discounted capital gains) is an important consideration in the daily management of the option.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option aims to invest the majority of its assets in cash and interest bearing securities. The option will aim to hold a minimum cash weighting of 20% of the option's net asset value. If the option cannot find suitable low risk investments, it will let the cash build up. The option will aim to be invested in cash and income securities including, but not limited to, hybrid securities, corporate bonds and asset-backed securities (both fixed and floating rate). The option has the ability to minimise or hedge against interest rate, credit spread and equity risk. Therefore, derivatives may be used to synthetically create or replicate underlying positions; however, derivatives may not be used to leverage the portfolio. Such derivatives may include options, futures, swaps, credit derivatives and warrants. The option may employ equity strategies to a maximum of 5% of the portfolio's net asset value. PM Capital attempts to hedge all foreign currency exposure back to the Australian dollar to substantially reduce the exposure of the option to the risks associated with movements in foreign exchange rates.

Allocation

Benchmark

N/A Australian and global shares
N/A Yield securities
N/A Cash and cash equivalents

A performance fee may apply of 25% of the net return (after management fees) above the Reserve Bank of Australia cash rate (inclusive of the net effect of GST and any related GST credits). For more information on the performance fee, refer to the fees section in the PDS.

This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

Schroder Wholesale Absolute Return Income

Short duration fixed interest

Objective

To outperform the Reserve Bank of Australia cash rate by 2.5% p.a. after fees and taxes over rolling three-year periods with no negative returns on a 12 month rolling basis.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option is an active absolute return strategy that invests in a range of domestic and international fixed income securities. The option invests primarily in a portfolio of bonds and other fixed and floating rate securities denominated in various currencies issued by corporates, governments, government agencies, supra-nationals as well as securitised credit such as asset and mortgage backed securities. The full spectrum of available securities, including non-investment grade, may be utilised. With a focus on managing downside risk, the option has the flexibility to invest in cash and other debt securities (such as government bonds) to help preserve capital during downturns in the credit cycle. In adopting an absolute return approach, the most critical element of the investment process is to identify which assets to own and when to own them. This is then complemented by extensive credit research and expertise in individual credit selection. The option may also use derivatives and active currency management as part of the overall investment strategy to create a well-diversified portfolio with the potential to deliver consistent returns above cash and term deposits but with less risk and volatility than the equity market.

Important information on emerging markets risk is provided on pages 16 to 17.

Affirmative Wholesale Global Impact Bond (wholesale only)

Diversified fixed interest

Objective

To seek to simultaneously create a positive and verifiable environmental and social impact whilst targeting a total return in excess of the Bloomberg Global Aggregate Index hedged to Australian dollars before fees and taxes over rolling three-year time periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option will invest primarily in investment grade global fixed income instruments, investing for the medium and longer term. The investable universe consists only of issues and issuers that have passed both an Environmental, Social, Governance (ESG) and sustainable/impact screen. The process for determining whether an issue and issuer is making a meaningful impact focuses on the use of proceeds, transparency measurability and responsible issuer analysis. The portfolio invests primarily in tradable debt securities but may use derivatives to gain market exposure or for risk management. The option can take active currency positions relative to the benchmark (that is hedged into Australian dollars).

Allocation

Benchmark

100% Cash and global fixed interest

Objective

The option aims to provide exposure to global credit markets and to generate income with some potential for capital growth over the medium to long term. The option aims to outperform its benchmark (Bloomberg AusBond Bank Bill Index (50%) and Bloomberg AusBond Composite 0+Yr Index (50%)) over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk**Strategy**

The option is actively managed and focused on generating stable investment income by providing diversified exposure to domestic and global credit markets while managing interest rate risk and currency risk. Bentham seeks to add value through actively managing allocations across different credit sectors, trading of individual securities and managing its interest rate and currency risk.

Bentham manages the option on a top-down basis. Active asset allocations are made according to quarterly forecasts of prospective risk-adjusted returns across a range of credit sectors. Drawing on a combination of both experience and strong relationships with specialist investment managers, Bentham seeks out and identifies global investment opportunities in credit markets with the aim to generate income with some potential for capital growth.

Bentham utilises a bottom-up analysis to select individual investments based on credit fundamentals and market information. The option must maintain a minimum investment of 50% in investment grade rated securities. Bentham aims to minimise credit risk with a focus on capital preservation and a high diversity of investments which would otherwise be difficult to achieve without access to global markets. Bentham aims to fully hedge any foreign currency exposures back to the Australian dollars.

The option gains exposure by investing in the underlying Bentham Global Income Fund via buying and selling units.

Important information on short selling risk and emerging markets risk is provided on pages 16 to 17.

Brandywine Wholesale Global Income Optimiser

Objective

The option's investment objective is to seek to generate a high and consistent level of income in all market conditions over a full market cycle with a secondary objective of capital preservation. The option aims to outperform the Bloomberg AusBond Bank Bill index over rolling five-year periods, before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk**Strategy**

The strategy seeks to balance income with the pursuit of total return based on the prevailing market environment. It leverages Brandywine's fundamental research and top-down macroeconomic analysis.

The option aims to provide an attractive and stable income by investing across diverse sources of income in global fixed income markets. It seeks the best global income opportunities, with a strong focus on protecting capital and to limit downside risk by rotating risk across different sectors of the fixed income market and through tactical hedging of credit and interest rate risk.

The option may employ a long/short investment strategy, which can generate returns by owning securities that the Brandywine expects will rise in value (long) and at the same time the option can sell (short) securities that are expected to decrease in value. The option will not directly short securities, but instead will hold any short positions exclusively through financial derivative instruments.

Using a value-oriented, global investing approach, Brandywine seeks to maximise the option's income through country, currency, sector, quality and security selection. The option aims to be at least 85% hedged to Australian dollars.

Important information on short selling risk and emerging markets risk is provided on pages 16 to 17.

Colchester Wholesale Global Government Bond

Diversified fixed interest

Objective

The option aims to generate income and increase the amount invested by investing in a globally diversified portfolio of government bonds and currencies. The option aims to outperform the FTSE World Government Bond Index hedged to AUD (before fees, costs and taxes) over rolling five-year periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option invests in bonds and currencies of predominantly investment grade rated countries. The option uses foreign exchange forwards (including non-deliverable foreign exchange transactions) to manage the currency risk in the portfolio. Colchester believes that both bond and currency markets can be valued in terms of their expected real returns, thereby providing an indication of their relative attractiveness.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

First Sentier Wholesale Diversified Fixed Interest

Diversified fixed interest

Objective

To outperform the Bloomberg AusBond Composite 0+Yr Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option is an actively managed portfolio that aims to add value by managing interest rate, inflation, and sector exposures and the mix of Australian and foreign securities. The option primarily invests in Australian and international fixed interest securities. Derivatives may be used for risk management or return enhancement. The option aims to hedge currency exposure.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

PIMCO Wholesale Diversified Fixed Interest

Diversified fixed interest

Objective

To achieve maximum total return by investing in underlying funds that invest in Australian and overseas bonds, and to seek to preserve capital through prudent investment management. The option aims to outperform the composite benchmark (Bloomberg AusBond Composite 0+Yr Index (50%) and Bloomberg Global Aggregate Index, hedged to Australian dollars (50%)), over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

In pursuing the option's investment objective, PIMCO applies a wide range of diverse strategies including duration analysis, credit analysis, relative value analysis, sector allocation and rotation and individual security selection. PIMCO's investment strategy emphasises active decision making with a long-term focus and seeks to avoid extreme swings in duration or maturity with a view to creating a steady stream of returns. PIMCO's portfolio construction and risk management efforts are designed to position the portfolio with exposure to a series of moderate risks, ensuring that no single trade idea or risk factor overwhelms the portfolio. Given its dynamic approach to active management, as well as its large size in certain cash markets, PIMCO may use derivatives to implement its trade ideas. The option may invest in derivatives to gain or reduce exposure to relevant markets and to manage investment risk. The option aims to hedge currency risk.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

PIMCO Wholesale Global Bond

Diversified fixed interest

Objective

The option utilises PIMCO's core fixed interest strategy of seeking strong, consistent investment returns while at the same time moderating the volatility of returns relative to the benchmark. The option aims to outperform the Bloomberg Global Aggregate Index hedged to Australian dollars over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

In pursuing the option's investment objective, PIMCO applies a wide range of diverse strategies including duration analysis, credit analysis, relative value analysis, sector allocation and rotation, and individual security selection. PIMCO's investment strategy emphasises active decision making with a long-term focus and seeks to avoid extreme swings in duration or maturity with a view to creating a steady stream of returns. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

T. Rowe Price Wholesale Dynamic Global Bond (wholesale only)

Diversified fixed interest

Objective

Seeks to generate positive returns from global fixed-income with a focus on downside risk and providing diversification from equity markets. The option seeks to outperform the Bloomberg AusBond Bank Bill Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

To maximise total return and provide income through investment primarily in a portfolio of fixed income securities which may include, but is not limited to, transferable debt securities of governments and their agencies, supranational organisations, corporations and banks as well as mortgage-backed and asset-backed securities. There are no restrictions on the sectors or countries in which bond issuers are located. The option may make extensive use of derivatives including, but not limited to, bond futures, forward foreign exchange contracts (including non-deliverable forwards), interest rate futures, options on interest rate futures, options on bond futures, currency options and OTC swaps including interest rate swaps and credit default swaps as well as swap indices. On an opportunistic basis, the option may create synthetic short positions in currencies, bonds and credit indices using various instruments including currency forwards, currency options, interest rate and bond futures, options on interest rate and bond futures, interest rate swaps, credit default swaps and swap indices. The option is generally hedged to Australian dollars, however can take small active currency positions, for example when there are opportunities to add value or hedge risks in the portfolio.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

1 There may be short periods where the portfolio is outside the noted exposure to government bonds and government related bonds as the Manager aims to protect the portfolio from extreme movement in markets.

UBS Wholesale Diversified Fixed Income

Diversified fixed interest

Objective

To provide investors with a total return in excess of the composite benchmark (Bloomberg AusBond Composite 0+Yr Index (50%) and Bloomberg Global Aggregate Index, hedged to Australian dollars (50%)), over rolling three-year periods after fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option is actively managed, based on fundamental research that draws upon the investment insights of the Manager's fixed income teams. The approach employs both "top-down" research, including analysis of economic factors, market data and macro credit themes and "bottom-up" research in respect of particular securities including analysis of earnings and cash flow stability, balance sheet strength, industry and valuation. Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

First Sentier Wholesale Australian Bond (wholesale only)

Australian fixed interest

Objective To outperform the Bloomberg AusBond Composite 0+Yr Index over rolling three-year periods before fees and taxes.	Strategy The option is an actively managed portfolio that aims to add value by managing interest rate, inflation, sector, and security exposures. The option primarily invests in Australian fixed interest securities and may have up to 30% exposure to global fixed interest markets. Derivatives may be used for risk management or return enhancement. The option aims to hedge currency exposure.

Janus Henderson Wholesale Tactical Income (wholesale only)

Australian fixed interest

Objective The option seeks to achieve a total return after fees and taxes that exceeds the total return of the Benchmark (Bloomberg AusBond Bank Bill Index (50%) and Bloomberg AusBond Composite 0+ Yr Index (50%)) over rolling three-year periods, by investing in a diversified portfolio of predominantly Australian income producing assets.	Strategy The option is an actively managed strategy that invests in a wide range of cash and fixed interest securities. These include debt issued by banks and other corporations, mortgage and other asset backed securities and government, semi-government and supranational bonds. The option may also allocate to Australian and global high yielding securities when attractive opportunities are identified. The option is designed to leverage the considerable expertise of the Manager and gives them the flexibility to tactically and actively allocate the option's assets based on their assessment of the outlook for the Australian and global economy, interest rates and fundamentals of the corporate sector within the context of the credit cycle. The flexible asset allocation ranges and fundamentally driven approach allows the Manager to meaningfully adjust the level of fixed interest exposure to both enhance performance in periods of falling interest rates and conversely, to protect value from the adverse impact of rising yields. The overall level of credit risk within the option is actively adjusted to reflect the Manager's assessment. The option gains exposure by investing in the underlying Janus Henderson Tactical Income Fund via buying and selling units.

Pendal Wholesale Sustainable Australian Fixed Interest

Australian fixed interest

Objective The option aims to provide a return (before fees, costs and taxes) that exceeds the Bloomberg AusBond Composite 0+ Yr Index by 0.75% p.a. over rolling three-year periods. The option offers an active tilt to impact bonds (green/climate, social and sustainability) to support positive societal and/or environmental outcomes (including advancement of United Nations Sustainable Development Goals).	Strategy The option offers investors access to a diversified portfolio of fixed interest securities and seeks exposure to issuers that demonstrate leading environmental, social and corporate governance (ESG) and ethical practices while avoiding exposure to issuers with activities that Pendal considers to negatively impact the environment or society. The option will not invest in companies or issuers directly involved in either of the production of tobacco or the manufacture of controversial weapons. The option will also not invest in issuers directly involved in any of the following activities, where such activities account for 10% or more of an issuer's total revenue; the production of alcohol, manufacture or provision of gaming facilities, manufacture of non-controversial weapons or armaments, manufacture or distribution of pornography, direct mining of uranium for the purpose of weapons manufacturing, or extraction of thermal coal and oil sands production. Pendal's investment process for fixed interest aims to add value through multiple alpha strategies including duration, yield curve, sector allocation and security selection. Pendal's process draws on quantitative and technical models in tandem with a qualitative fundamental overlay to generate excess returns. The investment process comprises of three main steps: macro inputs, credit/government research and portfolio construction. The macro input stage uses a combination of quantitative, qualitative and technical analysis. This drives the top down view on yields (duration/yield curve), credit spread direction and sector allocations. The credit and government research process incorporates fundamental issuer analysis, quantitative issuer modelling, ESG research and valuations to identify investment opportunities whilst avoiding deteriorating credits. The portfolio construction stage combines the macro inputs and the bottom up credit research arrived at during the investment process.

Risk 	Benchmark 100% Cash and fixed interest securities

PIMCO Wholesale Australian Bond

Australian fixed interest

Objective

The option utilises PIMCO's core fixed interest strategy of seeking strong, consistent investment returns while at the same time moderating the volatility of returns relative to the benchmark. The option aims to outperform the Bloomberg AusBond Composite 0+ Yr Index dollars over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

In pursuing the option's objective, PIMCO applies a wide range of diverse strategies including duration analysis, credit analysis, relative value analysis, sector allocation and rotation and individual security selection. PIMCO's investment strategy emphasises active decision making with a long-term focus and seeks to avoid extreme swings in duration or maturity with a view to creating a steady stream of returns. PIMCO's portfolio construction and risk management efforts are designed to position the portfolio with exposure to a series of moderate risks, ensuring that no single trade idea or risk factor overwhelms the portfolio. Given its dynamic approach to active management, as well as its large size in certain cash markets, PIMCO may rely heavily on derivatives to implement its trade ideas. The option may invest in derivatives to gain or reduce exposure to relevant markets and to manage investment risk. The option aims to hedge currency risk.

Allocation

Western Asset Wholesale Australian Bond (wholesale only)

Australian fixed interest

Objective

The option aims to earn an after fee and before taxes return in excess of the Bloomberg AusBond Composite 0+yr Index over rolling three-year periods.

Minimum suggested timeframe

At least 3 years

Risk

Strategy

The option provides exposure to an actively managed portfolio of Australian bonds. The investment approach aims to capture returns from a variety of actively managed sources, including interest rate management (duration), yield curve positioning, sector and security selection. Risk management is a core focus and is supported by credit research, diversification of holdings and investment guidelines.

The option is designed to be an active core fixed income allocation with a mandate to provide both defensive exposure and disciplined alpha generation. The option invests in government and semi-government bonds, corporate bonds and asset backed securities. Western Asset employs a value investing framework built on disciplined and rigorous analysis of prices relative to fundamental fair value.

Allocation

Aspect Wholesale Absolute Return (wholesale only)

Alternatives

Objective

To produce consistent absolute returns that are independent of overall movements in traditional stock and bond markets. The option aims to provide a return greater than the Reserve Bank of Australia cash rate over rolling three-year periods after fees and taxes.

Minimum suggested timeframe

At least 5 years

Risk

Strategy

Aspect takes a quantitative and systematic approach to investment management. Aspect has no market sector or directional preference, and markets are selected on the basis of diversification, liquidity and transaction costs. The option aims to maximise diversification by spreading risk evenly across three uncorrelated investment themes; Momentum, Carry and Value, with no single theme dominating the return profile. The strategy employs a quantitative process to determine a view of the opportunities across the three investment styles. It has exposure to over 230 of the most liquid global financial and commodity futures, currency forwards and other derivative contracts. By maintaining a comparatively small exposure to any individual contract, Aspect achieves sector and contract diversification, thereby exploiting a wide range of opportunities and maximising expected long-term risk-adjusted returns.

Allocation

Note: Futures and forwards are used to establish the market exposure of the option. The face value of the option's combined long and short positions will frequently be greater than 100% of the net asset value of the option and, as a result, the option will often be leveraged. The option receives earnings from cash allocations for the benefit of investors. A performance fee rate of 10% (inclusive of the net effect of GST and any related GST credits) will apply on the dollar value of positive performance after management fees (less carried forward negative performance) above the Reserve Bank of Australia cash rate. For more information on the performance fee, refer to the fees section in the PDS.

This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

Aspect Wholesale Diversified Futures

Alternatives

Objective To generate significant medium-term capital growth independent of overall movements in traditional stock and bond markets within a rigorous risk management framework. The option aims to provide a return greater than the Reserve Bank of Australia cash rate over rolling three-year periods after fees and taxes.	Strategy Aspect takes a quantitative and systematic approach to investment management. Aspect has no market sector or directional preference, and markets are selected on the basis of diversification, liquidity and transaction costs. Aspect's trend-following systems have exposure to over 230 of the most liquid global financial and commodity futures, currency forwards and (through an unlisted unit trust) other derivative contracts. These trend-following systems employ a quantitative process to collect, process and analyse market data in order for the model to determine a view of the trend-following opportunities in each market in the portfolio. By maintaining a comparatively small exposure to any individual contract, Aspect achieves sector and contract diversification, thereby allowing a wide range of opportunities to be exploited and maximising expected long-term risk-adjusted returns. The option aims to minimise unintentional currency exposure.
Minimum suggested timeframe At least 5 years	Allocation <div> <div>0%Range100%</div> <div>0-100%</div> </div> Benchmark N/A Cash, futures and forwards
Risk 	<p>Note: Global financial and commodity futures, currency forwards and (through an unlisted unit trust) other derivative contracts are used to establish the market exposure of the option. The face value of the option's combined long and short positions will frequently be greater than 100% of the net asset value of the option and, as a result, the option will often be leveraged. The option receives earnings from cash allocations for the benefit of investors.</p> <p>A performance fee rate of 20% (inclusive of the net effect of GST and any related GST credits) will apply on the dollar value of positive performance after management fees (less carried forward negative performance) above the Reserve Bank of Australia cash rate. For more information on the performance fee, refer to the fees section in the PDS.</p> <div> This option has been identified as a 'complex' option. AB Wholesale Managed Volatility Equities

Lower volatility share

Objective The option aims to achieve returns that exceed the S&P/ASX 300 Accumulation Index over rolling three-year periods before fees and taxes.	Strategy The option invests mainly in Australian Securities Exchange (ASX) listed shares but may also invest in global developed market shares (maximum limit of 20%) and cash. The option implements a managed volatility equities strategy that aims to reduce volatility by identifying, and investing in, high quality listed equity securities that have reasonable valuations, high quality cash flows and relatively stable share prices. The option does not always hedge the foreign currency exposures of its global equity assets to Australian dollars but the Manager has the discretion to determine the extent of hedging against any foreign currency exposure. Derivatives may be used to manage risks (including foreign currency risk), invest cash, manage volatility and gain or reduce investment exposures. The assets of the option may be used as security (collateral) for derivatives entered into on behalf of the option. Derivatives will not be used for leveraging or gearing purposes.
Minimum suggested timeframe At least 7 years	
Risk 	Allocation <div> <div>0%Range100%</div> <div>60-100%</div> </div> Benchmark N/A Australian shares N/A Global shares N/A Cash

Acadian Wholesale Global Managed Volatility Equity

Lower volatility share

Objective To provide returns similar to those of a global equity index, but with significantly lower absolute volatility and superior downside protection, over the longer term. Limiting absolute risk has the potential to allow investors to compound wealth more efficiently and steadily than traditional capitalisation weighted indices. The option aims to perform in line with the MSCI All Country World Index over rolling three-year periods before fees.	Strategy The option's investment strategy is based on building an equity portfolio that aims to provide returns similar to those of the global equity market but with lower absolute volatility than the global market over the full market cycle. The option aims to exploit the 'low volatility anomaly', the historical pattern in which higher volatility stocks have underperformed lower volatility stocks on a risk-adjusted basis. The initial consideration in constructing the portfolio is its overall level of risk; in addition, the option uses the same stock forecasts as Acadian's other equity strategies. These forecasts are designed to incorporate characteristics such as quality, value, earnings growth, and price-related factors. The option invests in a diversified portfolio of equities worldwide, including North America and Europe. The option does not hedge currency risk. <p>Important information on emerging markets risk is provided on pages 16 to 17.</p>
Minimum suggested timeframe At least 7 years	
Risk 	Allocation <div> <div>0%Range100%</div> <div>95-100%</div> </div> Benchmark 100% Global shares 0% Cash

First Sentier Wholesale Equity Income

Lower volatility share

Objective

To provide a total return comprised of regular income, franking credits and some capital growth from Australian shares over the long term, delivered with consistently lower volatility than the S&P/ASX 100 Accumulation Index. The option aims to deliver risk-adjusted returns that exceed the S&P/ASX 100 Accumulation Index before fees and taxes over a full market cycle.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's returns are generated from a number of sources directly or indirectly, including dividends, franking credits and capital returns from Australian shares, as well as income generated from equity options. The use of equity options in conjunction with Australian shares is expected to result in a greater proportion of the total return delivered as income and reduced volatility in returns. In the selection of Australian shares, investment opportunities are identified by detailed fundamental research, including a high number of company visits and utilising a proprietary database to analyse company financials. The option predominantly invests in Australian dollar denominated securities and therefore does not hedge currency risk. The option uses equity options to modify the return profile of its Australian share holdings, as well as for return enhancement and risk management purposes.

Allocation

Benchmark

Merlon Wholesale Australian Share Income

Lower volatility share

Objective

The option aims to provide a higher level of tax-effective income with a lower level of risk than the S&P/ASX 200 Accumulation Index, whilst also aiming to outperform the composite benchmark (70% S&P/ASX 200 Accumulation Index, 30% Bloomberg Ausbond Bank Bill Index) on a total return basis over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Merlon's investment approach is to construct a portfolio of undervalued companies, based on sustainable free cash flow, in broadly equal weights whilst using options to overlay downside protection on holdings with poor short-term momentum characteristics. An outcome of the investment style is a higher level of tax-effective income, along with the potential for capital growth over the medium term.

State Street Wholesale Australian Equity

Lower volatility share

Objective

To outperform the S&P/ASX 300 Accumulation Index over rolling five-year periods before fees and taxes but with a lower standard deviation than its benchmark.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is a long only, benchmark-unaware active strategy, which invests in listed Australian securities selected primarily from the S&P/ASX 300 Index.

The strategy focuses on the manager's best investment ideas in the universe regardless of benchmark construction, investing in the highest conviction stocks which demonstrate strong expected returns as assessed by valuation, growth capability, investor sentiment and company quality. Equally important is the investment manager's assessment of risk; which aims to minimize total portfolio risk by incorporating a comprehensive array of stock, industry and market level risk considerations.

Acadian Wholesale Australian Equity

Australian share

Objective

To maximise risk-adjusted, long-term returns by investing in stocks listed on the Australian Securities Exchange while carefully controlling portfolio risk and transaction costs. The option aims to outperform the S&P/ASX 300 Accumulation Index over rolling four-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's investment strategy is based on the belief that markets are inefficient, creating price anomalies that can be exploited by a disciplined, objective investment process. Acadian Australia's investment approach employs structured stock and peer group valuation models, which are designed to capture a broad range of relevant characteristics such as quality, value, earnings growth and price-related factors. This aims to systematically unearth securities with unrecognised value, as well as improving earnings prospects to help unlock that value.

Alphinity Wholesale Sustainable Share

Australian share

Objective

The option aims to outperform the S&P/ASX 300 Accumulation Index, before fees, costs and taxes over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Alphinity believes that a company's earnings growth and expected earnings growth ultimately drives its share price performance, and that there is a systematic mispricing of individual equities over the short to medium term due to under- or over-estimation of a company's earnings ability. This provides an opportunity for outsized investment returns as the true earnings trajectory inevitably becomes apparent to the market.

Alphinity believes that, through a well-tested and systematic combination of in-depth fundamental research and targeted quantitative analysis, the investment team can successfully identify quality, undervalued companies in or about to enter an earnings upgrade cycle and, as importantly, avoid or sell those stocks with deteriorating or overly optimistic market expectations. With the focus on identifying companies where the investment team's earnings expectations differ to those of the market, Alphinity prefers companies with attractive return estimates derived from a forecast earnings profile which differ from market expectations rather than a different valuation methodology or view.

In addition, the option aims to invest in companies that contribute positively to society and the environment, making net contributions to one or more of the UN Sustainable Development Goals and have strong Environmental, Social and Governance (ESG) characteristics. The option looks to avoid companies that are incongruent with the Fund's charter, are inconsistent with the achievement of the UN SDG goals and/or display poor ESG practices.

Ausbil Wholesale Active Sustainable Equity

Australian share

Objective

The option aims to achieve returns (before fees and taxes) in excess of the S&P/ASX 200 Accumulation Index over rolling three-year periods by primarily investing in listed Australian companies which meet Ausbil's sustainable approach to investing.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Ausbil's active investment process aims to exploit the inefficiencies across the market, at all stages of the cycle and across all market conditions, with the aim of producing consistent and risk controlled outperformance.

The option's investable universe is refined to remove companies subject to long-term earnings sustainability risk including companies with material direct exposure or a significant indirect exposure to: the production or distribution of alcohol, gambling, pornography; the distribution of tobacco; the production or distribution of weapons & armaments; the provision of predatory lending products; animal cruelty; the logging of old growth forests; the mining of uranium; and the exploration, mining and/or distribution of fossil fuels, such as oil, gas, oil sands and coal, unless a company plays a net positive role in the transition to a low carbon economy. Furthermore, the universe is refined to remove companies with a direct exposure to the production of tobacco and tobacco-based products; and the production of controversial weapon & armaments.

The option may invest up to 10% in exchange traded derivatives primarily to manage risk of the option. Derivatives are not used speculatively or for the purposes of gearing the option.

Ausbil Wholesale Australian Active Equity

Australian share

Objective To provide long-term growth with moderate tax-effective income. The option aims to outperform the S&P/ASX 300 Accumulation Index over rolling three-year periods before fees and taxes.	Strategy The option predominantly invests in a portfolio of listed large cap Australian equities in the S&P/ASX 300 Index. The option seeks to identify earnings and earnings revisions at an early stage, and hence to pre-empt stock price movements. The manager also seeks to position the portfolio towards those sectors and stocks which it believes will experience positive earnings revisions and away from those it believes will suffer negative revisions. At any time, the portfolio will be tilted toward stocks which afford the most compelling opportunities for appreciation over the coming 12 months.

Risk 	Benchmark 100% Australian shares 0% Cash

Bennelong Wholesale ex-20 Australian Equities

Australian share

Objective To provide a total return, through investments in primarily Australian shares, that aims to outperform the S&P/ASX 300 Accumulation Index excluding that part of the return that is generated by the stocks included in the S&P/ASX 20 Index over rolling three-year periods after fees and before taxes.	Strategy The companies within the portfolio are primarily selected from, but not limited to, the S&P/ASX 300 Accumulation Index, excluding the S&P/ASX 20 Index. The option may also invest in securities listed on other exchanges where such securities relate to ASX-listed securities.
Minimum suggested timeframe At least 7 years	Allocation 0% ————— Range ————— 100% 90–100% 0–10%
Risk 	Benchmark 100% Australian shares 0% Cash A performance fee may apply of 15% (inclusive of the net effect of GST and any related GST credits) of any amount by which the investment return of the option (after management fees) is greater than the return generated by the S&P/ASX 300 Accumulation Index excluding constituents that are also members of the S&P/ASX 20 Index. For more information on the performance fee, refer to the fees section in the PDS.

DNR Capital Wholesale Australian Equities High Conviction (wholesale only)

Australian share

Objective To invest in a high conviction portfolio of Australian equities that aims to outperform the S&P/ASX 200 Accumulation Index (before fees and taxes) over rolling three-year periods.	Strategy DNR Capital believes a focus on quality will enhance returns when combined with a thorough valuation overlay. DNR Capital seeks to identify good quality businesses that are mispriced by overlaying DNR Capital's quality filter, referred to as the 'quality web', with a strong valuation discipline. DNR Capital's security selection process has a strong bottom up discipline and focuses on buying quality businesses at reasonable prices. The portfolio construction process is influenced by a top-down economic appraisal and also considers the risk characteristics of the portfolio such as security and sector correlations. The investment strategy is intended to result in a portfolio that is high conviction and invests for the medium term.

Fidelity Wholesale Australian Equities

Australian share

Objective To achieve returns in excess of the S&P/ASX 200 Accumulation Index over rolling three-year periods before fees and taxes.	Strategy The Fidelity Wholesale Australian Equities option provides investors with the potential for long-term capital growth and some income by investing in a diversified portfolio of listed Australian shares. Fidelity believes that markets are semi-efficient and share prices don't always reflect inherent value. Through in-house, bottom-up company research, Fidelity aims to uncover the opportunities that it believes offer the greatest scope for outperformance. Based on this research approach, Fidelity seeks out stocks that it believes are undervalued and likely to generate growth. The companies selected for the portfolio must demonstrate good management, strong competitive advantages and enjoy favourable industry dynamics.

Pendal Wholesale Australian Share

Australian share

Objective The option aims to provide a return (before fees, costs and taxes) that exceeds the S&P/ASX 300 Accumulation Index over rolling three-year periods.	Strategy This option is designed for investors who want the potential for long term capital growth and tax effective income, diversification across a broad range of Australian companies and industries and are prepared to accept higher variability of returns. The option may also hold cash and may use derivatives. The manager's investment process for Australian shares is based on its core investment style and aims to add value through active stock selection and fundamental company research. The manager's core investment style is to select stocks based on its assessment of their long-term worth and ability to outperform the market, without being restricted by a growth or value bias. The manager's fundamental company research focuses on valuation, franchise, management quality and risk factors (both financial and non-financial risk). Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives can also be used to gain exposure to assets and markets.

Pendal Wholesale Sustainable Australian Share

Australian share

Objective

The option aims to provide a return (before fees, costs and taxes) that exceeds the S&P/ASX 200 Accumulation Index over rolling three-year periods, whilst maximising the portfolio's focus on sustainability.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

This option is designed for investors who want the potential for long-term capital growth and tax effective income, diversification across a broad range of Australian companies and industries and are prepared to accept higher variability of returns. The option uses an active stock selection process that combines sustainable and ethical criteria with Pendal's financial analysis. Pendal actively seeks out companies and industries that demonstrate leading environmental, social and corporate governance (ESG) and ethical practices and exclude companies not meeting the investable criteria.

The sustainability, ESG and ethical criteria employed includes factors such as; environmental issues, social practices, corporate governance, and ethical practices. In managing the option, Pendal avoids companies involved in: fossil fuels, uranium, logging, gambling, pornography, weapons, alcohol, tobacco, animal cruelty, predatory lending practices, and breaches/misconduct.

The option may hold cash and may use derivatives.

Pendal actively engages with the management of the companies they invest in to manage risk, effect change and realise potential value over the long term.

Perennial Value Wholesale Australian Share

Australian share

Objective

To grow the value of your investment over the long term via a combination of capital growth and tax-effective income by investing in a diversified portfolio of Australian shares. The option aims to outperform the S&P/ASX 300 Accumulation Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Perennial Value is an active value-based investment manager which invests in companies which are believed to have sustainable businesses (qualitative) and offer good value (quantitative). Original research is the cornerstone to this approach. Detailed modelling is conducted on approximately 200 companies, comprising the major companies listed on the Australian Securities Exchange and a number of smaller and mid-cap companies where the market capitalisation exceeds \$50 million (therefore the shares may at times fall outside the S&P/ASX 300 Accumulation Index). The process aims to ensure that the investment decisions are focused on buying stocks offering good value and selling stocks offering poor value.

Realindex Wholesale Australian Share Value

Australian share

Objective

To provide capital and income growth by investing in Australian shares and outperforming the S&P/ASX 200 Accumulation Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Realindex forms a universe of Australian companies based on accounting measures, which gives the portfolio a value tilt. Factors such as quality, near-term value and momentum are applied to form a final portfolio of companies. The resulting portfolio has a value tilt relative to the benchmark and provides the benefits of being lower in cost, lower turnover and highly diversified compared to traditional active investment strategies. By weighting the portfolio based on accounting measures and factors such as quality, value and momentum, Realindex aims to generate higher returns versus the benchmark over the long term.

T. Rowe Price Wholesale Australian Equity

Australian share

Objective

To provide long-term capital growth through investment primarily in a portfolio of securities of Australian companies listed on the Australian stock exchange. The option aims to outperform the S&P/ASX 200 Accumulation Index over rolling three-year periods after fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The strategy is a high conviction portfolio that seeks to identify high quality growing companies that T. Rowe Price expect to compound value faster than the overall market and outperform over time. The strategy relies on extensive proprietary fundamental research by an experienced Australian investment team collaborating with and receiving insights from the T. Rowe Price global research platform.

The strategy is a quality growth-oriented portfolio with fundamental, bottom up research at the core of the process. As a high conviction portfolio T. Rowe Price applies a proprietary business quality assessment process to identify high quality companies and non-consensus ideas. Detailed valuation work is then undertaken, utilising various techniques and scenarios, to ensure T. Rowe Price own these businesses at attractive prices.

Tyndall Wholesale Australian Share Income

Australian share

Objective

The option aims to provide a tax-effective income stream that exceeds the dividend yield of the S&P/ASX 200 Accumulation Index (grossed up for franking credits) by 2% p.a. over rolling five-year periods, before fees, expenses and tax, plus the potential for capital growth over the long term.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option invests in a diversified portfolio comprising 30-70 Australian shares that aim to grow their dividends and deliver capital growth. The option has a strong emphasis on tax effectiveness, focusing on franked income, off-market share buy backs and minimising share turnover to keep net realised gains low.

As an intrinsic value manager, the portfolio managers select stocks that represent good value with a focus on income-generating assets. The option is managed primarily on the basis of expected grossed up dividend yields. Where stocks offer additional potential for capital gains (as measured by the stock's Internal Rate of Return) as well as dividend yield, these may also be selected.

WaveStone Wholesale Australian Share

Australian share

Objective

The option aims to outperform the S&P/ASX 300 Accumulation Index before fees, costs and taxes over rolling three-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

WaveStone is an active investment manager that places primary emphasis on bottom-up stock picking through comprehensive research, instead of targeting a market index exposure.

WaveStone's investment approach focuses on companies which WaveStone believe exhibit Sustainable Competitive Advantage (SCA). A company's SCA is determined after analysing its corporate make up or 'DNA' and the broader industry dynamics within which it operates. This includes an assessment of the track record of the company's management team including their approach to capital allocation. WaveStone then applies a set of valuation, balance sheet and growth tests to further refine the number of companies that are considered suitable for the portfolio. Engagement with companies on ESG factors is a core part of the investment process and WaveStone believe that this reduces risk as well as creating value. Applying portfolio risk guidelines to the target portfolio of companies together with an assessment of how each company's share price is currently trading will determine the final portfolio mix for the option, typically between 20-50 individual company holdings.

The option can invest up to 10% in companies listed on international stock exchanges. This exposure may be hedged back to the Australian dollar from time to time at WaveStone's discretion. Derivatives may be used as a risk management tool to hedge against adverse market movements and at times, to gain exposure to underlying investments.

A performance fee may apply of 15% of the gross return (before management fees) above a composite benchmark (inclusive of the net effect of GST and any related GST credits). The composite benchmark consists of a weighting of 70% to the S&P/ASX Midcap 50 Accumulation Index and 30% to the S&P/ASX Small Ordinaries Accumulation Index. For more information on the performance fee, refer to the fees section in the PDS.

Celeste Wholesale Australian Small Companies

Australian share – small companies

Objective

To provide exposure to listed Australian companies outside the S&P/ASX 100 Accumulation Index and produce investment returns which exceed the S&P/ASX Small Ordinaries Accumulation Index, over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option provides exposure to a portfolio of 20 to 50 smaller company shares, actively managed to achieve returns above the S&P/ASX Small Ordinaries Accumulation Index over the medium term.

Allocation

Benchmark

100% Australian shares
0% Cash

A performance fee may apply of 20% of the net return (after management fees), above the S&P/ASX Small Ordinaries Accumulation Index. For more information on the performance fee, refer to the fees section in the PDS.

Eiger Wholesale Australian Small Companies

Australian share – small companies

Objective

The option aims to outperform the S&P/ASX Small Ordinaries Accumulation Index over rolling five-year periods (after fees and taxes).

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is an actively managed, style unaware portfolio of small to medium companies. The Eiger team follow a disciplined and proven investment management approach which seeks to identify quality companies that can deliver over the medium term.

Allocation

Benchmark

100% Australian shares¹
0% Cash

A performance fee may apply of 20% of the net return (after management fees) above the S&P/ASX Small Ordinaries Accumulation Index.

1 The option may have a small exposure to shares listed solely on the New Zealand Stock Exchange in its Australian share exposure.

First Sentier Wholesale Australian Small Companies (wholesale only)

Australian share – small companies

Objective

To provide long-term capital growth by investing predominantly in small Australian companies. The option aims to outperform the S&P/ASX Small Ordinaries Accumulation Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's strategy is to favour companies with sustainable competitive advantages, strong financials, quality management and predictable earnings. By investing in these companies, the option aims to deliver superior returns over the long term. The option predominantly invests in Australian companies and therefore does not hedge currency risk.

Allocation¹

Benchmark

100% Australian shares

1 A reference to Australian shares or companies may include, for example, units in trusts listed on the Australian Securities Exchange (ASX) and/or investments in companies listed on an overseas stock exchange if they are also listed on the ASX. The option may have a small exposure to shares listed solely on the New Zealand Stock Exchange in its Australian share exposure. The option may also purchase unlisted securities on the basis that the securities will list in the future.

First Sentier Wholesale Developing Companies

Australian share – small companies

Objective

To provide long-term capital growth that exceeds the S&P/ASX Small Ordinaries Accumulation Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The manager's growth approach is based on the belief that, over the medium-to-long term, share prices are driven by growth in a company's earnings, despite the existence of sentiment that can lead to short-term price volatility. The strategy is therefore to invest primarily in a portfolio of Australian companies with a market capitalisation or free float of generally less than \$500 million at the time of initial investment, with strong balance sheets, whose earnings are expected to grow at a greater rate than the Australian economy as a whole. The option predominantly invests in Australian companies and therefore does not hedge currency risk.

Allocation

First Sentier Wholesale Future Leaders

Australian share – small companies

Objective

To provide long-term capital growth by investing predominantly in small Australian companies. The option aims to outperform the S&P/ASX Small Ordinaries Accumulation Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's strategy is based on the belief that, over the medium-to-long term, stock prices are driven by the ability of management to generate excess returns over their cost of capital in their chosen industry. Management is a critical determinant in our assessment of small company investment opportunities outside the S&P/ASX 50 Index. The option seeks to own companies with strong balance sheets to be able to withstand short-term shocks to their operating environment. The option predominantly invests in Australian companies and therefore does not hedge currency risk.

Allocation¹

Benchmark

100% Australian shares
0% Cash

1 A reference to Australian shares or companies may include, for example, units in trusts listed on the Australian Securities Exchange (ASX) and/or investments in companies listed on an overseas stock exchange if they are also listed on the ASX. The option may also purchase unlisted securities on the basis that the securities will list in the future.

OC Wholesale Premium Small Companies

Australian share – small companies

Objective

To outperform the S&P/ASX Small Ordinaries Accumulation Index by 3–5% over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

OC provides a long-only benchmark-unaware strategy with a target investment universe of ASX-listed securities outside the S&P/ASX 100 Index. OC has a bottom-up, active approach to investing where the research effort is internally driven and focused on company visits and industry analysis. The team has a core focus on high quality businesses, favouring companies with strong management, simple and transparent business models, sustainable competitive advantages, favourable operational risk characteristics and attractive valuation metrics. There is a heavy emphasis on risk management, where OC screens out complex or speculative businesses from its investment process. The team also has a strong sell discipline which helps minimise losses when companies' financial or operational expectations are not met.

Allocation

Realindex Wholesale Australian Small Companies Value

Australian share – small companies

Objective

To provide capital and income growth by investing in smaller Australian companies and outperforming the S&P/ASX Small Ordinaries Accumulation Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Realindex forms a universe of smaller Australian companies based on accounting measures, which gives the portfolio a value tilt. Factors such as quality, near-term value and momentum are applied to form a final portfolio of companies. The resulting portfolio has a value tilt relative to the benchmark and provides the benefits of being lower in cost, lower turnover and highly diversified compared to traditional active investment strategies. By weighting the portfolio based on accounting measures and factors such as quality, value and momentum, Realindex aims to generate higher returns versus the benchmark over the long term.

Acadian Wholesale Sustainable Global Equity

Global share

Objective

To maximise risk-adjusted, long term active returns from a diversified portfolio of global securities while actively incorporating a range of Environmental, Social and Governance (ESG) investment criteria and reducing exposure to carbon intensive companies relative to the benchmark. The option aims to outperform the MSCI World (ex Australia) Index over rolling four-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Using a systematic investment approach, Acadian incorporates a range of ESG criteria to select stocks. These include excluding stocks that derive any revenue from the production or manufacturing of tobacco and controversial weapons; or more than 10% of gross revenue from the production or manufacture of products or services in alcohol, gambling and adult entertainment; derive more than 20% of gross revenue from thermal coal and tar sands oil; and stocks involved in notable ESG controversies such as human rights abuses or corrupt business practices. Where companies do not report revenue data, Acadian will use estimates from a third party provider. As part of its investment process, Acadian will target a reduction in carbon intensity of the portfolio relative to the MSCI World ex Australia index of at least 20%. The option will also aim to have a positive (at least 10% above the index using third party ratings) exposure to companies providing environmental solutions such as clean technologies and renewable energy. The option does not hedge currency risk.

Antipodes Wholesale Global

Global share

Objective

To achieve absolute returns in excess of the MSCI All Country World Index over rolling five-year periods before fees and taxes at below market levels of risk.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Antipodes seeks to take advantage of the market's tendency for irrational extrapolation, identify investments that offer a high margin of safety and build high conviction portfolios with a capital preservation focus. The strategy typically invests in a select number of attractively valued companies listed on global share markets (usually a minimum of 30 long holdings) and will typically have a net equity exposure of 50–100%. Long and short positions may be used where Antipodes sees attractive opportunities and also to offset specific unwanted portfolio risks and provide some protection from tail risk. Derivatives may also be used to amplify high conviction ideas.

Important information on short selling risk and emerging markets risk is provided on pages 16 to 17.

AXA IM Wholesale Sustainable Equity (wholesale only)

Global share

Objective

The option aims to provide a superior risk adjusted return (total return divided by total risk (before fees, expenses and taxes) greater than the return of the MSCI All Country World ex-Australia Index (Benchmark) on a rolling six year period, while also seeking significantly improved ESG metrics and lower carbon intensity than the Benchmark.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The AXA IM Sustainable Equity option is an actively managed global equity strategy designed to provide exposure to a portfolio of high quality, lower-volatility securities. It does so by systematically identifying stocks with superior earnings quality while also fully integrating environmental, social and governance (ESG) insights into the selection of investments. The result is a sustainable portfolio that seeks to capture the long-term growth associated with equities but with less risk and superior ESG credentials relative to the benchmark, MSCI All Country World ex-Australia Index.

Important information on emerging markets risk is provided on pages 16 to 17.

Baillie Gifford Wholesale Sustainable Growth (wholesale only)

Global share

Objective

To outperform the MSCI All Country World Index in AUD over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is a global equity strategy with a focus on sustainable growth and a long-term, bottom-up approach to stock selection. Baillie Gifford selects companies for both their growth and sustainability credentials. The portfolio excludes companies that are involved in the production of tobacco or controversial weapons. The portfolio also excludes companies that derive more than 10% of their annual revenues from:

- the sale of tobacco, or
- the production or sale of armaments; alcohol; gambling or adult entertainment related activities and fossil fuel extraction.

The portfolio also includes companies that satisfy 'positive inclusion factors' to mitigate ESG risks and embrace ESG opportunities. The option does not hedge currency risk. Refer to page 8 for more information about revenue measures and controversial weapons exclusions.

Baillie Gifford Wholesale Long Term Global Growth

Global share

Objective To outperform the MSCI All Country World Index over rolling five-year periods before fees and taxes.	Strategy The option is a purely stock-driven, unconstrained global equity strategy focused on investing in exceptional growth companies. This approach is expressly long term, with Baillie Gifford holding a belief that investing in companies with the scope to grow to multiples of their current size has the potential to transform the returns for investors over time. The option does not hedge currency risk.
Minimum suggested timeframe At least 7 years	
Risk 	Allocation 0% ————— Range ————— 100% 95–100% 0–5%
	Benchmark 100% Global shares 0% Cash

Barrow Hanley Wholesale Global Share

Global share

Objective To provide long-term capital growth and income through investment in quality global shares. The option aims to outperform the MSCI World Index over rolling three-year periods before fees and taxes.	Strategy The Investment Manager strives to achieve the above objectives by adopting a value-oriented, bottom-up investment process focused on in-depth fundamental research to identify companies that trade below their intrinsic value for reasons that they can identify, believe are temporary and have a clearly identified path to achieving fair value. The Investment Manager aims to select the most attractive securities to construct a well-diversified, high active share portfolio that provides asymmetrical returns by participating in up markets while protecting in down markets. The portfolio will exhibit a clear value bias and seek characteristics such as 1) price/earnings ratios below the market, 2) price/book ratios below the market, 3) enterprise value/free cash flow ratios below the market and 4) dividend yields above the market. The option will primarily invest in companies incorporated in developed markets and may hold up to 20% of the portfolio in companies incorporated in emerging markets. The portfolio has no direct tobacco stock exposure. The option does not hedge currency risk. Important information on emerging markets risk is provided on pages 16 to 17.
Minimum suggested timeframe At least 7 years

Epoch Wholesale Global Equity Shareholder Yield

Global share

Objective To generate superior risk-adjusted returns with a dividend yield that exceeds the dividend yield of the MSCI World (ex Australia) Index, over rolling five-year periods before fees and taxes.	Strategy The option pursues attractive total returns with an above average level of income by investing in a diversified portfolio of global companies with strong and growing free cash flow. Companies in the portfolio possess managements that focus on creating value for shareholders through consistent and rational capital allocation policies with an emphasis on cash dividends, share repurchases and debt reduction – the key components of shareholder yield. The portfolio generally holds between 90 and 120 stocks from equity markets worldwide (including emerging markets), with risk controls to diversify the sources of shareholder yield and minimise volatility. The option does not hedge currency risk. Important information on emerging markets risk is provided on pages 16 to 17.
Minimum suggested timeframe At least 7 years

	Benchmark 100% Global shares 0% Cash

GQG Partners Wholesale Global Equity (wholesale only)

Global share

Objective

The option aims to seek long term capital appreciation by investing directly or indirectly in equity securities and equity-linked securities anywhere in the world that GQG Partners believes can sustain long term earnings growth and are available at a reasonable price. The objective of the option is to provide a rate of return (after fees and expenses and before taxes) which exceeds the return of the MSCI All Country World Index ex Tobacco Index (AUD) over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The GQG Global Equity strategy seeks long-term capital appreciation by investing primarily in the equity securities of both U.S. and non-U. S. issuers that GQG believes are undervalued by the market. GQG believe that concentrated portfolios of high-quality companies with durable earnings, managed in a benchmark-agnostic fashion, will enable them to offer attractive risk-adjusted returns against the market index. GQG believe that out-performing in down markets is essential to achieving compounding. Therefore, the investment philosophy is rooted in buying high-quality companies and building portfolios that focus on diversifying end-consumer risk. GQG expect that this approach will achieve the dual objectives of achieving growth and protecting on the downside. The option does not hedge currency risk.

Important information on emerging markets risk is provided on pages 16 to 17.

Intermede Wholesale Global Equities (wholesale only)

Global share

Objective

The option aims to deliver a return that exceeds the MSCI All Country World Index (before fees and taxes) over rolling seven-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Intermede engages in intensive research to identify investment opportunities in mid and large capitalisation companies and across developed and emerging markets. The option is a concentrated portfolio of approximately 40 equities. Intermede's investment philosophy is that companies with good management and strong market positions in attractive industries will outperform if their shares are bought at the right price. Intermede implements its philosophy through a rigorous investment process. Intermede looks for companies that meet some or all of the following criteria; a sustainable competitive advantage eg a dominant position in their industry; a superior business model eg their costs grow more slowly than revenue; excellent management team eg proven track record and clear strategy for growth, and a price lower than Intermede's valuation for the company.

Important information on emerging markets risk is provided on pages 16 to 17.

Ironbark Royal London Wholesale Concentrated Global Share

Global share

Objective

The option seeks to outperform the MSCI World Index by 2-3% after fees and taxes, over rolling five-year periods through investment in a focused selection of equities on a global basis.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option adopts a high conviction, long-only stock picking approach that invests in listed shares of 20 – 45 companies around the globe which aims to create shareholder wealth as a result of their intentional management strategy and/or business models; identify stocks that are priced at a significant discount to conservative estimates of cash-based, long-term intrinsic value; and demonstrate a reasonable investment 'margin of safety' in the analysis of these two attributes. The option aims to be fully invested in global listed shares, however will have exposure to cash. The combination of management strategy, capital allocation, business models, long-term valuation opportunities and an investment 'margin of safety' leads to a style that is both valuation and quality focused. The option does not hedge currency risk.

1 Hedged means the option aims to hedge foreign currency exposure.

MFS Wholesale Global Equity

Global share

Objective

To provide capital appreciation over the longer term by investing in a diversified portfolio of global shares (unhedged) and aims to outperform the MSCI World Index over rolling five-year periods, before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

MFS' philosophy is based on the belief that companies with sustainable above-average growth and return prospects, which are not reflected in their valuation, will outperform over the long run. The value of compounding high returns on capital and above-average growth rates over long time periods is often underestimated by the market. Through fundamental analysis, MFS seeks to identify enduring businesses, focusing on operational risks and the long-term potential for change. MFS considers whether the valuation reflects the long-term growth and returns of the company, and to what extent it adequately incorporates risk. This option does not typically hedge currency risk.

Nanuk Wholesale New World (wholesale only)

Global share

Objective

To outperform the MSCI All Country World Index in AUD over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is an actively managed, diversified, global equity strategy that seeks to outperform traditional global equity indices through investment in a large and growing component of the overall global equity universe positively impacted by global sustainability trends. The option invests in companies that are benefiting from, or contributing to, improving global environmental sustainability and resource efficiency – primarily in areas such as clean energy, energy efficiency, industrial efficiency, advanced and sustainable materials, waste management, recycling and pollution control, food and agricultural productivity and healthcare technology. Nanuk's investment process incorporates a valuation-based approach coupled with fundamental insights into industries and investee companies and is focused on delivering strong investment returns from a clearly defined negatively and positively screened investment universe that will, by definition, result in an ethical portfolio that is aligned with global sustainability outcomes. Companies with a material level of involvement in activities that are not consistent with the Nanuk's focus on sustainability are precluded from investment. Companies operating in severe or potentially severe contravention of established norms for responsible business practices or that are involved in areas of significant environmental or ethical concern or otherwise misaligned with the sustainability focus of the Investment Manager are also excluded. This is implemented via comprehensive negative ESG based screening, investments held in companies that are assessed to violate the framework will be divested in a timely manner. The option does not hedge currency exposure.

Pendal Wholesale Concentrated Global Share

Global share

Objective

The option aims to provide a return (before fees, costs and taxes) that exceeds the MSCI World ex-Australia Index in AUD over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is designed for investors who want the potential for long term capital growth from a concentrated portfolio of global shares, diversified across a broad range of global sharemarkets and are prepared to accept higher variability of returns. The option invests in global companies that offer attractive investment opportunities predominantly in markets such as the USA, UK, Continental Europe, Asia and Japan. The option may also hold cash and use derivatives.

Pendal's investment process for global shares aims to add value through active stock selection and fundamental company research. Pendal focuses on identifying a company's long term value and potential risk reward opportunity and is benchmark agnostic. Pendal's high conviction approach to the option's investments seeks to invest in companies that are out of favour, considered to be undervalued in the near term and offer long term capital growth. The option will typically hold between 35-55 stocks.

The option has assets that are denominated in foreign currencies. This means that changes to the Australian dollar relative to foreign currencies may affect the value of the assets of the option. Generally, these currency exposures will not be hedged to the Australian dollar but Pendal may do so from time to time.

Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives may also be used to gain exposure to assets and markets.

Allocation

Pendal Wholesale Global Select (wholesale only)

Global share

Objective

The option aims to provide a return (before fees, costs and taxes) that exceeds the MSCI All Country World Index over rolling 5 year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is designed for investors who want the potential for long-term capital growth from a concentrated portfolio of listed global equities, with an investment time frame of five years or greater and are prepared to accept higher variability of returns.

The option's strategy is based on a belief that stock markets are inefficient and aim to exploit market anomalies via an investment process that combines both top-down and bottom-up research. The underlying investment manager's (J O Hambro Capital Management) distinct '4-Dimensional' investment process (stocks, sectors, countries, time/change) focuses on the behaviour of each share price to determine whether the most important driver of each prospective investment is stock specific, sector or country-based.

The strategy will typically hold 30-60 stocks and is benchmark agnostic.

The investment manager recognises that ESG factors can create risks and opportunities for companies and as such incorporates ESG risks into their analytical framework and portfolio construction. Further, the strategy employs exclusionary screens to avoid investments in companies that cause significant social and/or environmental harm.

The strategy has assets that are denominated in foreign currencies. This means that changes to the Australian dollar relative to foreign currencies may affect the value of the assets of the strategy. Generally, these currency exposures will not be hedged to the Australian dollar but may be from time to time. Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives may also be used to gain exposure to assets and markets.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Talaria Wholesale Global Equity

Global share

Objective

The option aims to generate superior risk-adjusted returns and distributions 3% per annum greater than the yield on the MSCI World (ex Australia) Value Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Talaria's lower risk approach seeks to compound wealth and reduce volatility via a combination of capital appreciation and an above average level of income. Talaria generally invests in 25 – 40 global companies trading at discounts to its assessment of their intrinsic value. The conservative use of options to enter and exit positions generates consistent income and lowers portfolio volatility. This option does not hedge currency risk.

Allocation

T. Rowe Price Wholesale Global Equity

Global share

Objective

To provide long-term capital appreciation by investing primarily in a diversified portfolio of companies that have the potential for above-average and sustainable rates of earnings growth. The option aims to outperform the MSCI All Country World (ex Australia) Index over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

T. Rowe Price believes that active management, driven by bottom-up fundamental research, can uncover and exploit anomalies among global equities. The team applies a global, high-conviction, and growth-oriented approach, looking for companies with the potential for either growth or relative improvement, located in industries where the outlook is becoming more attractive across developed and emerging markets. The option's benchmark is unhedged. Currency hedging may be used from time to time. Important information on emerging markets risk is provided on pages 16 to 17.

Fidelity Wholesale Asia

Global share – emerging markets

Objective

To achieve returns in excess of the MSCI All Country Asia (ex-Japan) Index over rolling five-year periods, before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The Fidelity Wholesale Asia option provides investors with the potential for long-term capital growth by investing in companies located in Asia, as well as companies located elsewhere that derive a significant proportion of their earnings from Asia (Asian Shares).

Fidelity believes that markets are semi-efficient and share prices don't always reflect inherent value. Through in-house, bottom-up company research, Fidelity aims to uncover the opportunities that it believes offer the greatest scope for outperformance.

Based on this research approach, Fidelity seeks out stocks that it believes are undervalued and likely to generate growth. The companies selected for the portfolio must demonstrate strong management, financial strength and competitive advantages.

The option's exposure to international securities will not be hedged back to Australian dollars. This means that the value of an investment in the option will change not only on the basis of a change in asset values, but also because of movements in exchange rates.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Benchmark

Pendal Wholesale Global Emerging Market Opportunities

Global share – emerging markets

Objective

The option aims to provide a return (before fees, costs and taxes) that exceeds the MSCI Emerging Markets Index over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

This option is designed for investors who want the potential for long-term capital growth, diversification across a broad range of global emerging market shares and are prepared to accept high variability of returns. The option can invest in shares in a range of emerging markets and may also hold cash.

The manager's investment process for global emerging market shares aims to add value through a combination of country allocation as well as individual stock selection. The manager's country allocation process is based on analysis of a country's economic growth, monetary policy, market liquidity, currency, governance/politics and equity market valuation. The stock selection process focuses on buying quality growth stocks at attractive valuations.

The option's foreign currency exposure will generally not be hedged to the Australian dollar but the manager may do so from time to time. The manager does not intend to use currency trading as an additional source of the option's returns.

Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives can also be used to gain exposure to assets and markets.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Platinum Wholesale Asia

Global share – emerging markets

Objective

To provide capital growth over the long term through searching out undervalued listed (and unlisted) investments in the Asian region excluding Japan. The option aims to outperform the MSCI All Country Asia (ex Japan) Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option primarily invests in the listed securities of Asian companies. Asian companies may be listed on exchanges other than those in Asia, and the option may invest in those securities. The option may invest in companies not listed in Asia where their predominant business is conducted in Asia. The option may invest in companies that benefit from exposure to the Asian economic region.

The portfolio will ideally consist of 40 to 100 securities that the manager believes to be undervalued by the market. Cash may be held when undervalued securities cannot be found. The manager may short sell securities that it considers overvalued. The portfolio will typically have 50% or more net equity exposure.

The manager may also invest in unlisted securities, but in aggregate such investments will not exceed 20% of the net asset value of the option. Derivatives (options, swaps and futures) may be used for risk management and for opportunities to increase returns; however, the effective exposure of derivative positions (excluding forward foreign exchange contracts and stock borrowing covering short equity positions), stocks and participatory notes will not exceed 150% of the portfolio's net asset value. The manager may also use foreign exchange contracts and derivatives on foreign exchange contracts to take currency positions.

Important information on short selling risk and emerging markets risk is provided on page 16 to 17.

Allocation

Note: The principal investments in the option are international equities. Cash and cash equivalents typically represents less than 40% of the portfolio's net asset value.

This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

Realindex Wholesale Emerging Markets Value

Global share – emerging markets

Objective

To provide capital and income growth by investing in global shares predominantly in emerging markets and outperforming the MSCI Emerging Markets Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Realindex forms a universe of emerging market companies based on accounting measures, which gives the portfolio a value tilt. Factors such as quality, near-term value and momentum are applied to form a final portfolio of companies. The resulting portfolio has a value tilt relative to the benchmark and provides the benefits of being lower in cost, lower turnover and highly diversified compared to traditional active investment strategies. By weighting the portfolio based on accounting measures and factors such as quality, value and momentum, Realindex aims to generate higher returns versus the benchmark over the long term. This option does not hedge currency exposure.

Important information on emerging markets risk is provided on pages 16 to 17.

Allocation

Stewart Investors Wholesale Global Emerging Markets Leaders Sustainability

Global share – emerging markets

Objective

To achieve long-term capital growth through investing in companies in emerging economies, including those listed on developed market exchanges whose activities predominantly take place in emerging market countries. The option aims to outperform the MSCI Emerging Markets Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option invests in quality companies that are in position to contribute to, and benefit from, sustainable development within emerging economies. Sustainability is at the heart of all investment considerations.

Investment decisions around companies focus on:

- Quality of management including integrity, attitude to environmental and social impacts, corporate management, long-term performance and risk.
- Quality of the company franchise including its social usefulness, their environmental impacts and efficiency and responsible business practices.
- Quality of the company's financials including a preference for low net debt, strong cashflows and fair tax practices, as well as robust financial performance.

Stewart Investors recognise and support the need for societies to maintain a sustainable ecological footprint as they develop and believe a company's ability to contribute to and benefit from helping societies to achieve this is a key indicator of its quality.

The option does not hedge currency risk.

Allocation

Acadian Wholesale Australian Equity Long Short

Specialist share

Objective

To maximise risk-adjusted, long-term returns by investing in undervalued stocks and short selling overvalued stocks listed on the Australian Securities Exchange while carefully controlling portfolio risk and transaction costs. The option aims to outperform the S&P/ASX 300 Accumulation Index over rolling four-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's investment strategy is based on the belief that markets are inefficient, creating price anomalies that can be exploited by a disciplined, objective investment process. Acadian Australia's investment approach employs structured stock and peer group valuation models, which are designed to capture a broad range of relevant characteristics such as quality, value, earnings growth and price-related factors. This aims to systematically unearth securities with unrecognised value, as well as improving earnings prospects to help unlock that value. Stocks that Acadian Australia believes are undervalued will be purchased, and overvalued stocks will be selectively short sold. The option will target a gross long exposure of 130% and a gross short exposure of 30% (130/30).

Important information on short selling risk is provided on page 16.

Allocation

Acadian Wholesale Global Equity Long Short

Specialist share

Objective

To maximise risk-adjusted, long-term returns by investing in undervalued stocks and short selling overvalued stocks from around the world, while carefully controlling portfolio risk and transaction costs. The option aims to outperform the MSCI World Index over rolling four-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Janus Henderson Wholesale Global Natural Resources

Specialist share

Objective

The option seeks to achieve a total return after fees and taxes that exceeds the total return of the S&P Global Natural Resources Accumulation Index over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option will typically invest in 50-70 companies that the manager has identified as being quality global natural resource companies operating in the mining, energy and agriculture natural resources sectors. The option may have exposure across upstream (production and exploration), midstream (storage, transportation and marketing commodities) and downstream (smelting, refining and selling of processed mineral, energy and agricultural products to end users) segments of the natural resources supply chain. The investment approach used by the manager utilises bottom-up fundamental research and screens for quality, valuation, favourable ESG characteristics and growth potential to identify companies that are best placed to benefit from the ongoing demand for natural resources. The manager's global investment approach enlarges the overall size and breadth of the natural resources investment universe and also improves the chance of early identification of profitable resource investment trends and pricing inefficiencies across global markets. The option does not hedge currency exposure back to the Australian dollar.

Important information on emerging markets risk is provided on pages 16 to 17.

Perpetual Wholesale Share-Plus Long-Short

Specialist share

Objective

The option aims to provide long-term capital growth and income through investment in quality shares and taking short positions predominately in selected Australian Shares and to outperform the S&P/ASX 300 Accumulation Index (before fees and taxes) over rolling three-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Perpetual researches companies of all sizes using consistent share selection criteria. Perpetual's priority is to select those companies that represent the best investment quality and are appropriately priced. In determining investment quality, investments are carefully selected on the basis of four key investment criteria; conservative debt levels; sound management; quality business and recurring earnings.

In addition, Perpetual aims to take short positions predominately in Australian shares that it believes will fall in value. The short positions are determined based on each stock's expected returns and the investment constraints (designed to reduce the risks associated with taking short positions). The option may have up to 20% exposure to investments in international shares where we believe there are opportunities that may enhance returns. The option may have up to 10% exposure to short positions in international shares. Derivatives may be used in managing the option.

Objective

To provide capital growth over the long term through searching out undervalued listed (and unlisted) investments around the world. The option aims to outperform the MSCI All Country World Index over rolling five-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk**Strategy**

The option primarily invests in listed securities. The portfolio will ideally consist of 70-140 securities that the manager believes to be undervalued by the market. Cash may be held when undervalued securities cannot be found. The manager may short sell securities that are considered to be overvalued. The portfolio will typically have 50% or more net equity exposure. The manager may also invest in unlisted securities, but in aggregate such investments will not exceed 20% of the net asset value of the option. Derivatives (options, swaps and futures) may be used for risk management and for opportunities to increase returns; however, the effective exposure of derivative positions (excluding forward foreign exchange contracts and stock borrowing covering short equity positions), stocks and participatory notes will not exceed 150% of the portfolio's net asset value. The manager may also use foreign exchange contracts and derivatives on foreign exchange contracts to take currency positions.

PM Capital Wholesale Global Companies

Objective

To provide long-term capital growth and outperform the greater of the MSCI World Index or the Reserve Bank of Australia cash rate after fees and taxes over rolling seven-year periods. The goal of the option is not to replicate the standard industry benchmarks such as the MSCI, and it is likely to have varied outcomes from those of a traditional index benchmarked option.

Minimum suggested timeframe

At least 7 years

Risk**Strategy**

The option invests in a focused portfolio with approximately 25 to 45 stock-specific ideas diversified across global stock markets. The portfolio may also own interest bearing debt securities (which includes government or corporate bonds, asset-backed, inflation-linked, structured, hybrid securities and tradeable loans). All the portfolio positions are subject to intensive research and peer group review. If PM Capital cannot find appropriate opportunities, the option may hold up to 100% cash and cash equivalents. PM Capital can use derivatives and sell stocks short as a risk management tool. Derivatives (including futures, options, swaps, credit derivatives, forwards and warrants) may also be used to synthetically create or replicate an underlying position. The level of direct shorts (where shares are borrowed and sold in the market) generally will not be in excess of 30% of the portfolio. Leverage is used on a prudent basis; for example, where gross dividend yields exceed borrowing costs. Leverage generally shall not exceed 30% of the net asset value of the option. The option is managed from an Australian investor's perspective. Tax and currency exposures are important considerations in the daily management of the option. PM Capital may elect to hedge up to 100% of the foreign currency exposure or remain fully exposed to any currencies in which the option may invest.

Important information on short selling risk is provided on page 16.

	0-30%		N/A Yield securities
		0-100%	N/A Cash

Note: Leverage may be used to increase the effective exposure of the option to 130% of the underlying portfolio's net asset value. The underlying portfolio's gross exposure is limited to 170%.

A performance fee may apply of 20% of the net return (after management fees) above the Reserve Bank of Australia cash rate plus 4.5% (inclusive of the net effect of GST and any related GST credits).

This option has been identified as a 'complex' option. Accordingly, for this option, we have provided further disclosure and reporting prescribed by ASIC, as outlined in the PDS for the product you wish to invest in or are otherwise considering. This information is provided in the Reference Guide – Complex Funds, available online at colonialfirststate.com.au/complex or by calling 13 13 36.

Objective

The option aims to achieve positive returns in excess of the S&P/ASX200 Accumulation Index, after fees expenses and before taxes, over rolling five-year periods by taking both long positions and short positions in selected Australian shares.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option is a 150/50 long/short strategy that may have 90-150% of its Net Asset Value ('NAV') invested in long positions and 0-50% of NAV invested in short positions. The option's typical net market exposure will be 90-100% as it can hold up to 10% of NAV in cash. The option seeks to deliver style neutral returns that are consistent across market cycles. It achieves this by breaking the market up into eight custom Sage Groups and selecting long and short positions within them. Low net exposure is maintained to each of these Groups to limit style or thematic bias across the portfolio. Stock selection is driven by a blend of fundamental and quantitative investment strategies. The quantitative process systematically ranks stocks using a range of momentum, value and quality factors while the fundamental process goes into more detail to understand the key drivers of a company's earnings and assess its relative value. The long/short structure allows the portfolio to capture a broad level of information from the investment process while maintaining a high level of diversification, producing a better risk/reward outcome than a long only approach. The option may invest up to 10% in exchange traded derivatives.

Important information on short selling risk is provided on page 16.

Dexus Wholesale AREIT

Australian property and infrastructure securities

Objective

To provide consistent distributions exceeding the S&P/ASX 300 A-REIT Index's dividend yield. The option aims to deliver returns with lower volatility than the Index and provide capital growth tracking CPI over rolling five-year periods, before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Dexus will continually review and re-weight the portfolio with the objective of optimising the distributable income. Dexus actively invests and constructs the portfolio independent of index weightings. By evaluating the potential risks and rewards of the underlying A-REITs, Dexus will determine the relative value and attractiveness of the stocks including those outside of the benchmark. Dexus limits the portfolio's exposure to riskier corporate-style earnings (such as development and funds management activities) with a bias to passive rental earnings.

Allocation

Ironbark Wholesale Property Securities

Australian property and infrastructure securities

Objective

The option seeks to outperform the S&P/ASX 300 A-REIT Accumulation Index, after fees and before taxes, over rolling three-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option invests predominantly in Australian property trusts and property related securities, with some exposure to cash investments. The option may also invest in international property securities and Initial Public Offering ('IPO') securities, provided those securities are expected to be listed within three months of issue. The option may have exposure to derivatives for investment and currency management purposes. In particular, derivatives may be used by the Investment Manager for hedging to protect an asset in the option; against market value fluctuations; to reduce volatility in the option; as a substitute for a physical security and when adjusting asset exposures within the investment parameters of the option.

Allocation

Martin Currie Wholesale Real Income

Australian property and infrastructure securities

Objective

To generate an income yield in excess of the S&P/ASX 200 Index unfranked yield over rolling three-year periods before fees and taxes. The option aims to provide long-term growth in its dividend income in excess of CPI.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The investment manager applies a tailored investment approach to construct a portfolio of ASX-listed real income securities (such as property, utility and infrastructure securities), to deliver sustainable income over the medium-to-long term. The investment manager assesses each investment for its dividend-paying attributes, as well as its risk quality and ability to provide inflation protection over time. Disciplined portfolio construction rules and risk controls are utilised by the investment manager to help construct a portfolio of Australian real income securities that aims to offer liquidity and investment transparency.

Allocation

1 The option invests primarily in Australian property and infrastructure securities and may have up to 20% exposure to stocks outside of Australia.

Pendal Wholesale Property Investment

Australian property and infrastructure securities

Objective

The option aims to provide a return (before fees and taxes) that exceeds the S&P/ASX 300 A-REIT Accumulation Index over rolling three-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

This option is designed for investors who want the potential for long term capital growth and income, diversification across a broad range of primarily Australian listed property securities and are prepared to accept higher variability of returns. The option invests in property securities including listed property trusts, developers and infrastructure investments. The option invests primarily in Australia but at times it may have some overseas exposure. Up to 10% of the option can be invested in international listed property securities. The option may also hold cash and may use derivatives.

Pendal's investment process for property securities is based on its valuation-driven investment style and aims to add value through active security selection and fundamental investment research.

The option's foreign currency exposure will generally be fully hedged back to the Australian dollar to the extent considered reasonably practicable.

Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives can also be used to gain exposure to assets and markets.

Allocation

First Sentier Wholesale Global Listed Infrastructure

Global property and infrastructure securities

Objective

To deliver capital growth and inflation protected income by investing in a globally diversified portfolio of infrastructure securities. The option aims to outperform the FTSE Global Core Infrastructure 50-50 (Net TR) Index hedged to Australian dollars over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option invests in shares of infrastructure companies around the world. The infrastructure sector includes operating assets from the transport, utilities, energy and communications sectors. The strategy is based on active, bottom-up security selection which seeks to identify mispricing. The option seeks to minimise risk through on-the-ground research, focus on quality and sensible portfolio construction. This option aims to hedge its currency exposure.

Allocation

Benchmark

100% Infrastructure securities¹

1 This includes infrastructure and infrastructure-related securities.

First Sentier Wholesale Global Property Securities

Global property and infrastructure securities

Objective

To maximise total returns to the investor by investing in a portfolio of listed property securities from around the world. The option aims to outperform the FTSE EPRA/NAREIT Developed Index, hedged to Australian dollars, over rolling three-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's strategy is to bring together specialist resources in order to identify undervalued global real estate securities with minimal downside risk, sustainable earnings growth and good qualitative attributes. The option uses proprietary forecasting and valuation methodologies and a disciplined portfolio construction process with an over-riding focus on absolute and relative risk. The option provides investors with exposure to a broad selection of property-related investment opportunities. The option also uses environmental, social and governance scores embedded in the investment process as part of its company selection process. Sustainability considerations including a company's commitment to carbon emission reductions are assessed in the initial screen of companies used to determine the investible universe and the exclusion of companies from the investment universe.

The option aims to hedge currency exposure.

A performance fee may apply of 10% of the net return (after management fees) above the S&P Global Infrastructure Index (inclusive of the net effect of GST and any related GST credits). For more information on the performance fee, refer to the fees section in the PDS.

Quay Wholesale Global Real Estate – Unhedged (wholesale only)

Global property and infrastructure securities

Objective

To provide a total return (before fees, expenses and taxes) of the Australian Consumer Price Index (CPI) + 5% per annum over rolling five-year periods.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The Quay Global Real Estate (Unhedged) option invests in a portfolio of real estate securities listed on securities exchanges around the world. It is relatively concentrated, with a high conviction-based approach, and does not hedge currency. The strategy focuses on delivering investors real total returns (index-unaware), and invests through the cycle whilst also taking advantage of counter-cyclical opportunities. The primary goal is to identify and invest in a portfolio of global real estate securities that; meet or exceed the return objective; offer reliable long-term cash flows; have robust balance sheets; are managed by experienced and competent managers; and offer returns assisted by secular themes and/or demographic tailwinds. The investment team has a disciplined and repeatable investment process with a strong focus on risk and quality cash flows. The majority of income is derived from leases, rent and other real estate related income (avoiding developers and non-rent income streams). Real estate sectors include Storage, Retail, Health, Housing, Apartments, Office, Industrial and Student Accommodation. The option does not hedge currency risk.

A performance fee may apply of 15.375% of the net return (after management fees) above the FTSE EPRA/NAREIT Developed Index of the option.

Resolution Capital Wholesale Global Property Securities

Global property and infrastructure securities

Objective

The option's investment objective is to exceed the total returns of the FTSE EPRA/NAREIT Developed Index (AUD Hedged) after fees over a rolling three year basis. In doing so, the option aims to provide investors with a level of distributable income combined with the potential for long term capital growth sourced from global real estate based revenue streams.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option primarily invests in global listed REITs and real estate securities that derive most of their returns from rental income. The option's investments provide exposure to a range of underlying real estate from around the world including office buildings, shopping centres, industrial warehouses, residential communities, hotels and healthcare facilities. The option may also have exposure to companies which undertake activities such as real estate development, real estate construction contracting and real estate funds management activities.

Resolution Capital believes that optimum risk-adjusted returns can be achieved through a concentrated portfolio of 30 to 60 stocks. In constructing the portfolio, bottom-up stock analysis is combined with the identification of broader investment and direct real estate market themes. Resolution Capital adopts a 'multiple portfolio manager' approach for its global portfolio construction. Resolution Capital intends to mitigate currency risk through hedging the capital component of the option's exposure to global real estate securities and may also hedge currency exposure arising from income receivable from global real estate securities at its discretion.

Acadian Wholesale Geared Australian Equity

Geared

Objective

To maximise long-term returns by borrowing to invest, predominantly, in a selection of Australian companies within the S&P/ASX 300 Accumulation Index, while carefully controlling portfolio risk and transaction costs. The option aims to outperform the S&P/ASX 300 Accumulation Index over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option uses gearing with the aim of magnifying returns from the underlying Australian equity strategy. The underlying strategy aims to exploit the 'low volatility anomaly', the historical pattern in which higher volatility stocks have underperformed lower volatility stocks on a risk-adjusted basis. The resulting underlying portfolio aims to provide returns similar to those of the Australian equity market but with lower absolute volatility over the full market cycle. Gearing the underlying strategy has the potential to reduce drawdowns compared to gearing a normal index strategy and therefore aim to provide higher expected returns for lower risk over the long term.

Important information on gearing risk is provided on pages 15 to 16.

Acadian Wholesale Geared Sustainable Global Equity

Geared

Objective

To maximise risk-adjusted, long-term returns by borrowing to invest in stocks from around the world, while carefully controlling portfolio risk and transaction costs. The option aims to outperform the MSCI World (ex Australia) Index over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

Using a systematic investment approach, Acadian incorporates a range of ESG criteria to select stocks. These include excluding stocks that derive any revenue from the production or manufacturing of tobacco and controversial weapons; or more than 10% of gross revenue from the production or manufacture of products or services in alcohol, gambling and adult entertainment; derive more than 20% of gross revenue from thermal coal and tar sands oil; and stocks involved in notable ESG controversies such as human rights abuses or corrupt business practices. Where companies do not report revenue data, Acadian will use estimates from a third party provider. As part of its investment process, Acadian will target a reduction in carbon intensity of the portfolio relative to the MSCI World ex Australia index of at least 20%. The option will also aim to have a positive (at least 10% above the index using third party ratings) exposure to companies providing environmental solutions such as clean technologies and renewable energy. The option utilises gearing to magnify returns from underlying investments. The option does not hedge investors' currency risk, but may hedge up to 100% of the currency exposure relating to the borrowings.

Important information on gearing risk is provided on pages 15 to 16.

First Sentier Wholesale Geared Share

Geared

Objective

To magnify long-term returns from capital growth by borrowing to invest in large Australian companies. The option aims to outperform the S&P/ASX 100 Accumulation Index over rolling seven-year periods before fees and taxes.

Minimum suggested timeframe

At least 7 years

Risk

Strategy

The option's strategy is based on the belief that, over the medium-to-long term, stock prices are driven by the ability of management to generate excess returns over their cost of capital in their chosen industry. The option generally invests in large, high quality companies with strong balance sheets and earnings. The option utilises gearing to magnify returns from underlying investments. The option predominantly invests in Australian companies and therefore does not hedge currency risk. Where the option borrows in a foreign currency, proceeds will be fully hedged into Australian dollars.

Important information on gearing risk is provided on pages 15 to 16.

Allocation

Benchmark

100% Australian shares
0% Cash

Note: A geared option will not always magnify gains (particularly in a low return environment), but will always magnify losses. Investors will therefore experience increased volatility in the value of their investment. This means that investors will have potentially large fluctuations both up and down in the value of their investments.
